Requirements of a Royal Mail MAILMARK™ Franking Machine

MAILMARK™ Franking is the newest and most efficient Franking mark from the Royal Mail. It supersedes the traditional 'town and crown' die with a machine readable 2D barcode. The Royal Mail has invested £70m in automating their distribution centre's to allow the reading of the new Mailmark 2D Barcode.

MAILMARK™ franking machine users will receive the best pricing available from a franking machine. This offering from the Royal Mail requires a Mailmark enabled Franking Machine. You may be able to upgrade rather than replace your technology – Please contact us for further information.

MAILMARK™ product usage data

MAILMARK™ Franking machines are required to send product usage data on a regular basis to the Royal Mail. This is required as follows:

- Low volume machines e.g. Mailmark Mymail and PostBase mini will connect to the Data Centre and provide product usage data every 7 days, with 5 grace days.

- The remainder of the FP Mailmark franking range will connect to the Data Centre and provide product usage data every working day, with 1 grace day.

The Franking indicia date

MAILMARK™ Franking Machines will advance the Franking date automatically to the next day's date at 17.00 each day to ensure Royal Mail quality of service standards for collections and deliveries are maintained. Franking and posting of your mail after 5pm when the franked date has advanced forwards is perfectly acceptable.

If you have any questions or would like further information about FP's Mailmark enabled products then please call us on 0500 223563 or visit www.fpmailing.co.uk
