

**Are you seeking
imaging results
that best support you
in making the right decision
for your patient?**

Visit ABC Imaging Center, Townsville, USA, 000-000-0000

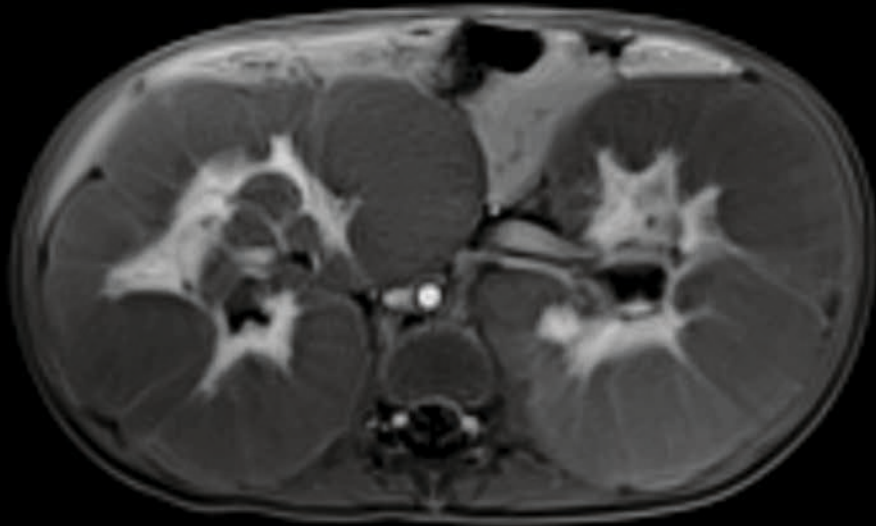

Body MRI exams for sound therapeutic decisions in patients incapable of holding their breath.

With our new technology FREEZEit we can provide those results.

It allows to reliably scan patients with limited breathhold capacities who have previously been excluded from an MRI scan, such as children, elderly, and very sick patients.

18-month-old female with Nephroblastoma

FREEZEit – StarVIBE
