## NHS Foundation Trust (UK)

### Siemens Healthineers at the heart of Britain's biggest hospital development

In March 2006, the redevelopment of St. Bartholomew's (Barts) and the Royal London Hospital in Whitechapel was confirmed, to form the UK's largest hospital. Siemens Healthineers was selected to provide a £370 million, 35-year Managed Equipment Services (MES) partnership to supply imaging and radiotherapy equipment as well as Ultrasound systems to both hospitals. The MES is a component of Siemens Healthineers successful global Asset Management Service portfolio.

A proven track record, flexibility and a thorough understanding of NHS culture ensured that Siemens Healthineers was the right partner for the project. Siemens Healthineers became involved with a specially formed consortium, 'Capital Hospitals', at an early stage in the project and was able to share considerable expertise with the equity investors involved. This specialist input led to the production of a design that was 'right first time', vitally important in such a large scale project.

*"Siemens Healthineers is an all-round player, it has technical strength across every area as well as a reputation for being solid and dependable."*

.....  
Ed Hogbin, Equipment Project Manager at Barts Health NHS Trust

*"We expect a managed equipment service to release a huge amount of management time and to take a lot of hassle out of our lives."*

.....  
Mark Viner, Clinical Development, Senior Project Manager at Barts Health NHS Trust

The products/features and/or service offerings (here mentioned) are not commercially available in all countries and/or for all modalities. If the services are not marketed in countries due to regulatory or other reasons, the service offering cannot be guaranteed. Please contact your local Siemens Healthineers organization for further details. The statements by Siemens Healthineers customers described herein are based on results that were achieved in the customer's unique setting. Since there is no "typical" hospital and many variables exist (e.g., hospital size, case mix, level of IT adoption) there can be no guarantee that other customers will achieve the same results.
