

One system, one room, dual capabilities

Fluoroscopy and advanced radiography in one.
The Luminos dRF Max.

Fluoroscopy systems without a fully integrated radiography plane require more space in your facility, multiple workstations, and additional time for exams.

**There is an easier way—
the Luminos dRF Max 2-in-1
fluoroscopy and radiography
system.**

**Limit errors, support greater consistency and
standardize image quality**

- One integrated workstation for fluoroscopy and radiography is easier to learn, use, and provides greater efficiency than multiple workstations.
- Eliminate variables with MAXalign, which displays the detector angle on the display screen. By enabling users to simply align the X-ray tube according to the detector angle shown, MAXalign supports higher exam quality and consistency. This also helps reduce the need for repeat exposures, saving time and improving safety.

Make patient positioning faster and more accurate to support higher clinical confidence

- Improve positioning accuracy and efficiency with automated detector and tube tracking.
- Change all image parameters and uniquely adjust the examination order directly on the MAXtouch color touchscreen while you remain with the patient.

Simplify workflow with built-in charging and flexibility

- Innovative, automatic charging of the MAX wi-D detector when it is placed in the wall stand tray.
- Flexible Bucky wall stand that tilts from -20 to +90 degrees for easier patient positioning.
- Handheld controls for easier operation.

Support for multiple clinical applications

- Image stitching
- Digital subtraction angiography
- Bone suppression
- Tomography
