

SARS-CoV-2 Total Assay ¹

Secure your community with science and scale

A total antibody assay helps give a complete picture of infection status and immune response

S1RBD

Smart selection of S1RBD antigen looks to the future and protects today

The antibody test is highly accurate in identifying SARS-CoV-2 antibodies and is designed to detect the spike protein receptor binding domain (S1RBD) on the surface of the SARS-CoV-2 virus which binds the virus to cells via a distinct human receptor (ACE2) found in lungs, heart, multiple organs and blood vessels.

Evidence shows antibodies to the spike protein are **neutralizing** – an important link to vaccine development

1. This test has been authorized for sale by Health Canada under the Interim Order Respecting the Importation and Sale of Medical Devices for Use in Relation to COVID-19, and has not been licensed under the Health Canada Medical Devices Regulation. This test has been authorized only for the detection of antibodies to SARS-CoV-2, not for any other viruses or pathogens. This test is only authorized for the duration of the Interim Order, for a period of up to one year, unless it is renewed or unless the authorization is cancelled sooner. Product availability may vary by country and is subject to varying regulatory requirements.

2. Installed base of ADVIA Centaur XP, ADVIA Centaur XPT, ADVIA Centaur CP, Atellica Solution, Dimension Vista and Dimension EXL analyzers.

3. For samples collected ≥ 14 days after positive PCR result.

4. Based on results for the ADVIA Centaur COV2T assay.

5. Depending on test mix and configuration using Atellica Solution.
