SmartSimulator

Your virtual connection to a hands-on scanner experience

In the healthcare sector, medical equipment and clinical workflows are becoming increasingly complex. For healthcare professionals, continuous training is crucial to stay on top of techniques and technology. This includes being able to tap the full potential of medical equipment. Blocking a medical device for training purposes, however, results in lower patient throughput and reimbursement rates combined with high costs due to a lack of equipment and staff availability.

Virtual trainings using cloud-based simulation provide an enriching learning environment for safe practical training that doesn't interrupt the usage of your clinical equipment.

SmartSimulator is designed to provide a simulated training experience with medical devices from Siemens Healthineers using a cloud-based solution on a personal computer.

- **Enhance confidence** by providing staff with hands-on experience using a virtual medical device guided by an expert, improving the scanning efficiency of each individual
- **Increase device utilization** with shorter ramp-up times for devices and employees to keep your daily operations running for higher throughput
- **Boost performance at lower cost** by leveraging innovative technology with scan practice on simulated, cloud-based medical device interfaces

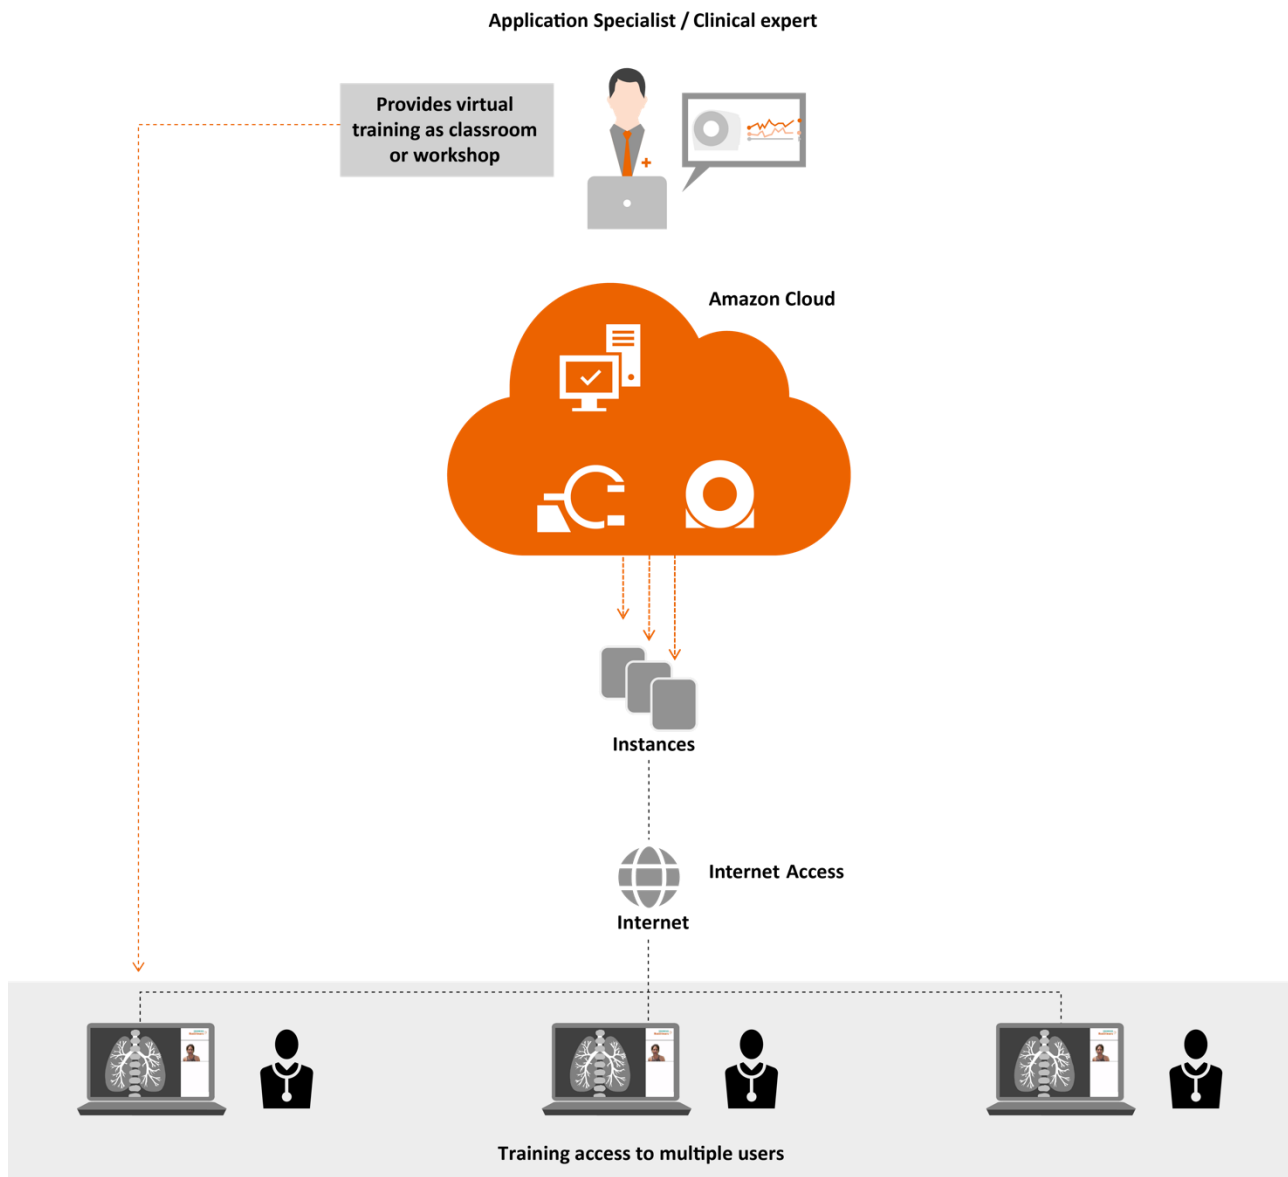

Unrestricted

SIEMENS
Healthineers

Guided, virtual training sessions allow users to gain hands-on experience without interrupting the clinical workflow.

SmartSimulator offers hands-on experience and improves scanning efficiency through virtual training. Each session is led by an experienced application trainer from Siemens Healthineers, who will guide participants through workflows using virtual systems and answer questions.

This product is under development and not commercially available. Its future availability cannot be ensured. Please contact your local Siemens Healthineers organization for further details. Not for clinical use. For training purposes only.
