Reviewers wanted

SYNOPE is a peer-reviewed open access journal reporting current research results in chemical sciences in full paper, letter, and graphical review format.

Synthetic methodologies • Asymmetric synthesis and catalysis • Catalytic methods for synthesis • Inorganic and organometallic synthesis • Natural products synthesis and total synthesis • Medicinal chemistry and drug design • Biosynthesis and biocatalysis • Synthetic photochemistry • Synthetic electrochemistry • Solid-state synthesis • Polymer synthesis • Supramolecular synthesis and self-assembly • Mechanochemistry • Automation in synthesis • Computational methods in synthesis and machine learning • Processing techniques and scalability • Recycling processes and sustainable synthesis

The journal offers authors the option of **Select Crowd Review (SCR)**; a faster, more **interactive** and **modern** reviewing process than traditional peer review.

With SCR, a selection of up to 100 experts and like-minded community members, who are exclusive **members of the crowd**, can discuss the manuscript **anonymously** and **collaboratively** via a secure online platform.

Join the crowd today to be a part of a collaborative and inspiring reviewer community!
