**EDITORS**  
Reinhard Kubale, MD, PhD, Associate Professor of Radiology and Head of Ultrasound Department, Clinic of Diagnostic and Interventional Radiology, Saarland University Medical Center, Homburg, Germany.

Hubert Stiegler, MD, Internist and Angiologist, Vascular Center Münchener Freiheit; former Senior Director of Clinic for Angiology of Munich City Hospital, Munich, Germany.

Hans-Peter Weskott, MD, Internist and Head of Ultrasound Outpatient Clinic, KRH Clinic Siloah, Hannover, Germany.

**DESCRIPTION**  
An interdisciplinary guide to vascular color flow imaging and CEUS organized by anatomic region

The indications for vascular color duplex sonography (CDS) have expanded in recent years due to the availability of power Doppler, B-flow, ultrasound contrast agents, 3D reconstruction techniques, and fusion with other imaging modalities. CDS enables close-interval follow-ups after interventional procedures with improved prognoses. Edited by Reinhard Kubale, Hubert Stiegler, and Hans-Peter Weskott, *Vascular Ultrasound: B-Mode, Color Doppler and Duplex Ultrasound, Contrast-Enhanced Ultrasound* starts with the basic principles of diagnostic ultrasound physics and technology, followed by invaluable tips on equipment settings, possible artifacts, and limitations; hemodynamic essentials; and the use of ultrasound contrast agents. Subsequent chapters organized by anatomic region provide coverage of all peripheral and abdominal arterial and venous vascular regions; microcirculation and tumor perfusion; kidney and liver diseases; vascular malformations; non-atherosclerotic vascular diseases; the use of contrast-enhanced ultrasound (CEUS) in biliary, intestinal, splenic, and pediatric diseases; and novel/future techniques.

**Key Features**

- Contributions from interdisciplinary experts in angiology, neurology, radiology, vascular surgery, gastroenterology, nephrology, phlebology, rheumatology, laser medicine, and physics
- In-depth guidance on examination techniques, findings, and potential pitfalls and how to avoid them
- A wealth of comparative CT, MRI, and angiography CDS images and 37 videos enhance the understanding of impacted anatomy and the ability to master techniques and make accurate diagnoses

This print book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**COMPETITION**  

CONTENTS

Part I: Basic Principles
1 Principles of Physics and Technology in Diagnostic Ultrasound
2 Ultrasound Device Settings, Examination Technique, and Artifacts
3 Hemodynamics
4 Ultrasound Contrast Agents—Fundamentals and Principles of Use

Part II: Vascular Ultrasound
5 Extracranial Cerebral Arteries
6 Intracerebral Arteries and Brain
7 Limbs
8 Nonatherosclerotic Arterial Diseases: Vasculitis, Fibromuscular Dysplasia, Cystic Adventitial Disease, Compression Syndromes
9 Vascular Malformations

Part III: Abdominal Organs: Vascularization and Perfusion
10 Aorta and Outgoing Branches
11 Visceral Arteries
12 Abdominal Veins
13 Microcirculation and Tumor Perfusion
14 Kidneys and Renal Transplants
15 Liver and Portal Venous System
16 Contrast-Enhanced Ultrasound (CEUS) in Biliary Diseases
17 Contrast-Enhanced Ultrasound (CEUS) in Intestinal Diseases
18 Contrast-Enhanced Ultrasound (CEUS) in Pancreatic Diseases
19 Contrast-Enhanced Ultrasound (CEUS) in Splenic Diseases
20 Contrast-Enhanced Ultrasound (CEUS) in Pediatric Diseases
21 Novel and Upcoming Ultrasound Techniques
A comprehensive, practical resource on reconstructive techniques after Mohs surgery

Since the 1980s, dermatologists have increasingly assumed the reins of surgical reconstruction after Mohs micrographic surgery of the head and neck, as well as delicate areas of the hands, feet, and genitalia. Volume I of Procedural Dermatology: Postresidency and Fellowship Compendium, edited by esteemed dermatologists David H. Ciocon and Yoon-Soo Cindy Bae, provides a comprehensive review of the latest techniques in surgical reconstruction after Mohs surgery based on the location of the defect. The content reflects years of firsthand expertise from an impressive group of internationally recognized reconstructive surgery experts, who contributed chapters on evidence-based surgical, cosmetic, and laser techniques.

Key features:

- Editors are fellowship trained, double board-certified in dermatology and micrographic dermatologic surgery
- Contributions from pioneers in the field, including Richard Bennett and John Zitelli
- A concise, algorithmic approach enhances acquisition of knowledge, while allowing treatment tailored to individual cases
- Sixteen consistently formatted chapters discuss anatomy-specific reconstructive techniques from the scalp to the lower legs, as well as scar revision, melanoma, and prevention and repair of internal nasal valve dysfunction

This is the quintessential resource on restorative surgery after Mohs surgery for dermatology fellows and clinicians who are new to practice. It will also benefit seasoned dermatologic surgeons looking to hone and expand their existing techniques.

Also available:
This print book includes complimentary access to a digital copy on https://medone.thieme.com.

**DESCRIPTION**

A comprehensive, practical resource on state-of-the-art cosmetic dermatology procedures

Volume II of *Procedural Dermatology: Postresidency and Fellowship Compendium*, edited by esteemed dermatologists Yoon-Soo Cindy Bae and David H. Ciocon, provides a comprehensive review of minimally invasive and noninvasive procedures to treat a wide range of cosmetic issues and conditions. Twenty-four consistently organized chapters cover the most up-to-date developments in cosmetic dermatology. Topics include ablative and nonablative resurfacing; body contouring; tissue tightening; laser treatment for vascular and pigmented lesions; scar, acne, and tattoo removal; the use of neuromodulators; soft tissue fillers; hair removal and restoration techniques; blepharoplasty; treatment options for axillary hyperhidrosis; thread lifts; liposuction; and fat transfers.

**Key features:**

- Reflects the collective wisdom of dermatology thought leaders and innovators who pioneered the majority of current laser and cosmetic treatments
- Incorporates a patient-centered approach tailored to individual needs, concerns, ethnicity, anatomy, skin type, and functional status
- Firsthand pearls and pitfall prevention strategies throughout the text focus on improving patient outcomes
- Procedural videos demonstrate chemical peels and high-definition body contouring techniques

This practical book provides early-career dermatologists with expert guidance that enriches their existing cosmetic dermatology skills and inspires learning and incorporating new techniques into practice to optimize patient care.

**Also available:**

This print book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**Description**

**Men's Aesthetics: A Practical Guide to Minimally Invasive Treatment**

The first edition of *Men's Aesthetics: A Practical Guide to Minimally Invasive Treatment*, edited by leading dermatologist Jeremy Brauer, is a comprehensive and exciting new entry into the fascinating discipline of minimally invasive treatments for men.

This book assembles a group of renowned experts from around the world to cover a range of topics in the field, including aesthetic preferences of men, anatomical changes in men as they age, as well as a variety of treatments and procedures from volumizing the face to the use of neuromodulators and fillers, chemical peels, lasers, lights and energy devices, skin tightening, and treating male pattern hair loss and hair restoration.

The thoughtful discussions on aesthetic concerns in men, men of color, and transgender patients will be of particular interest for those interested in building, growing, and maintaining a well-rounded male aesthetic practice.

**Key Highlights:**

- 12 procedural chapters that cover a wide range of minimally invasive treatments for men
- Clinical pearls that impart best practice, allowing the reader to digest important facts and nuances of the procedures covered in the book
- Instructive, step-wise videos that detail targeted procedures
- 200 illustrations and clinical photos from thousands of procedures performed by the authors

This is an invaluable guide for practitioners interested in the spectrum of male aesthetic topics and will be helpful both to novices as well as seasoned veterans in the aesthetic medicine field.

This print book includes complimentary access to a digital copy on [https://medone.thieme.com](https://medone.thieme.com).

**Contents**

1. The Male Aesthetic Patient: Preferences and Practice
2. Tincture of Time: Facial Aging and Anatomical Considerations
3. Taking a Hard Look: Soft Tissue Augmentation
4. High Brow Approach to Neuromodulators
5 Following the Pattern: Hair Restoration
6 Finding the Right Balance: Chemical Peels
7 The Tech Sector: Lasers, Light, and Energy Devices
8 Keg to Six Pack: Fat and Cellulite Treatments
9 Not too Tight: Skin Tightening Procedures
10 Aesthetic Concerns in Skin of Color Patients
11 Aesthetic Concerns in Transgender Patients
12 Bringing it All Home: Conclusions and Future Considerations
An anatomical, patient-oriented approach to neurologic diagnosis from renowned neurosurgeons

Despite strides in advanced neuroimaging techniques, what remains constant in the practice of neurology and neurosurgery is the enduring value of observing and interpreting patient signs and symptoms at bedside. Authored by renowned neurosurgeons Cary D. Alberstone, Edward C. Benzel, Michael P. Steinmetz and distinguished colleagues, Anatomic Basis of Neurologic Diagnosis, Second Edition details neuroanatomy in an organized, thorough manner, tipping its hat to the art and science of neurologic diagnosis. Like the widely acclaimed first edition, the updated volume emphasizes a logical, patient-oriented approach to neurologic diagnosis, conspicuously absent from most standard neuroanatomy texts.

New to this second edition are a portfolio of carefully curated MRI images and sections on neuroplasticity, peripheral nerve architecture, peripheral nerve injury and recovery, electrodiagnostic diagnosis of radiculopathy, tremor, deep brain stimulation targets (and side effects), autonomic disorders, altered states of consciousness, and spontaneous intracerebral hemorrhage. Two sophisticated new chapters address our current understanding of Memory and Neural Networks.

Key Features:

- Clinically pertinent anatomy is described succinctly and in plain language
- The cardinal manifestations of regional nervous system disorders facilitate localization of lesions
- Logical approaches to system-based complaints aid in differential diagnosis
- Learning objectives begin each chapter, graced by a variety of easy-to-grasp conceptual drawings
MRI images, new to this edition, enrich and amplify the text

The authors present a practical, reader-friendly, and patient-centric approach to diagnosing neurological disorders. Residents, fellows, and practitioners in neurology, neurosurgery, and neuroradiology, and those studying for board examinations will enjoy reading this indispensable resource.

This print book includes complimentary access to a digital copy on https://medone.thieme.com.

**COMPETITION**  None of the books on the market cater to neurosurgeons first, which our title does.

**CONTENTS**

Section I: Development and Developmental Disorders
1. Neuroembryology

Section II: Regional Anatomy and Related Syndromes
2. Peripheral Nerves

**EDITORS**

Prof. Dr. Yves Harder, MD, is Head and Medical Director of the Department of Plastic, Reconstructive and Aesthetic Surgery, Ospedale Regionale di Lugano, Ente Ospedaliero Cantonale (EOC), Lugano, Switzerland and Professor at the Faculty of Biomedical Sciences, Università della Svizzera Italiana, Lugano, Switzerland.

Prof. Dr. Christoph Hirche, MD, FACS, is Professor of Plastic Surgery and Head of the Department of Plastic Surgery, Hand Surgery and Reconstructive Microsurgery, Hand Trauma and Replantation Center, BG Klinik Frankfurt am Main gGmbH, affiliated hospital to Goethe University Frankfurt, Frankfurt am Main, Germany.

Dr. Katrin Seidenstücker, MD, is Specialist in Plastic and Aesthetic Surgery and Head of the Department of Plastic and Aesthetic Surgery Sana Hospital Benrath, Düsseldorf, Germany, affiliated hospital to Heinrich Heine University, Düsseldorf, Germany.

Prof. Dr. Moustapha Hamdi, MD, is Professor of Plastic Surgery and Head of the Department Plastic Surgery and Founder of Lymph Clinic, Brussels University Hospital, Head of UZBrussel-Chirec Joint-Network in Plastic Surgery, Brussels, Belgium.

**DESCRIPTION**

"This book illustrates the current state of surgical treatment of lymphedema, including diagnostics, conservative treatment, postsurgical treatment, and research. It is an optimal guide for those who want to become experts in lymphatic disease and its treatment." Isao Koshima

The first edition of Modern Surgical Management of Chronic Lymphedema, edited by Yves Harder, Christoph Hirche, Katrin Seidenstücker, and Moustapha Hamdi, has been conceived and written by enthusiasts for lymphatic surgery who have dedicated their professional careers to treating patients suffering from this chronic disease.

Featuring current perspectives and particularities of surgical lymphedema treatment with contributions from international experts in the field, this innovative book describes evidence-based, multi-disciplinary approaches to treating chronic lymphedema from the point of view of clinical experts. It is also a comprehensive companion for multi-professional specialists looking for an erudite understanding of the complex treatment of lymphedema.

Ultimately, the book seeks to advance the contemporary understanding that underpins the philosophy and general principles of modern surgical management of chronic lymphedema, in order to improve the quality of life of patients.

**Key highlights:**
• Firsthand clinical pearls for treating lymphedema patients and managing the often-chronic issues that significantly impact on daily quality of life
• General focus on the fields of embryology, anatomy, physiology, and pathophysiology of the lymphatic system
• Special focus on diagnosis, evaluation, and complete decongestive therapy (CDT)
• Step-by-step descriptions of the surgical corner-stones, including lymphovenous anastomosis (LVA), vascularized lymph node transfer (VLNT), and alternative supermicrosurgical techniques, as well as reductive and lymphoablative surgery
• Unique contributions on the diagnosis and treatment of lymphatic filariasis
• Basic concepts of experimental research in the field
• Evidence- and expert-based algorithm for personalized and stage-dependent treatment
• Over 70 full-color and highly instructive illustrations and more than 250 clinical images

This is a valuable and practical resource for surgeons of various clinical fields with supermicrosurgical expertise, lymphologists and angiologists, general practitioners, psychologists, lymphedema therapists, dietitians, specialized nurses, as well as medical students.

This print book includes complimentary access to a digital copy on https://medone.thieme.com.

COMPETITION

CONTENTS
Section I: Lymphology and Clinical Presentation
1 Lymphatic System
2 Epidemiological, Clinical, and Pathophysiological Aspects
3 Lymphatic Filariasis

Section II: Diagnostic Evaluation
4 Diagnostics and Stage-Dependent, Preoperative Evaluation

Section III: Modern Management of Chronic Lymphedema
5 Establishment of an Interprofessional and Multidisciplinary Lymphedema Network

Section IV: Non-Surgical Treatment and Techniques
6 Integrative, Multiprofessional Conservative Treatment

Section V: Surgical Treatment and Techniques
7 Basic Principles of Surgical Treatment and Accompanying Complete Decongestive Therapy

Section VI: Lymphoreconstructive Procedures
8 Lymphovenous Anastomosis
9 Autologous Lymph Vessel Transfer
10 Vascularized Lymph Nodes Transfer
11 Autologous Breast Reconstruction in Conjunction with Lymphatic Surgery
12 Nodo-Venal Shunt Microsurgery

Section VII: Lymphoreductive Procedures, Secondary Procedures, and Tips and Tricks
13 Suction-Assisted Lipectomy
14 Excisional Procedures
15 Secondary Procedures After Reconstructive Microsurgery
16 Tips and Tricks for Modern Surgical Management of Chronic Lymphedema

Section VIII: Training, Treatment Algorithm, Outcomes, and Further Developments
17 Teaching and Training in Lymphoreconstructive Surgery
18 Treatment Algorithm for the Lymphedema
19 Review of the Current Literature
20 Experimental Research and Future Directions
As a result of the rising incidence of obesity worldwide, there has been an exponential rise in the number of bariatric procedures performed during the last few decades. Massive weight loss patients present with challenging deformities alongside medical, psychological, and physiologic comorbidities that add complexity to surgical correction of these deformities. *The Art of Body Contouring: After Massive Weight Loss, Second Edition* edited by internationally-renowned body contouring surgeons Al Aly and Fabio Nahas features significant advances in body contouring techniques that have occurred since publication of the widely acclaimed 2006th Edition.

The book reflects techniques that were developed and refined by the world’s leading master body contouring surgeons, with invaluable insights that were gleaned from the treatment of thousands of patients, which helped improve surgical outcomes. The opening chapter provides a background on obesity, its prevalence, ramifications, and in-depth discussion of bariatric surgery. Chapter 2 discusses how to effectively and safely perform circumferential belt lipectomy and attain the best possible results. Chapter 4 by Dirk Richter et al. covers his approach to lower truncal deformities. Chapters 5 and 6 detail innovations developed by Dr. Aly, starting with the arm reduction technique that revolutionized brachioplasty surgery more than 20 years ago, followed by upper body lifts which he named, introduced, and developed over a period of two decades. Chapter 8 by Constantino Mendieta is a master class in buttocks contouring. Chapters 9 and 10 by Peter Rubin and Jim Grotting address their unique ways of handling tough breast deformities in massive weight loss patients.

**Key Features**

- Contributions from an impressive group of leading global body contouring experts, including the late Ted Lockwood, Dirk Richter, Peter Rubin, Jim Grotting, and Constantino Mendieta
- How to eliminate the use of drains in all excisional body contouring surgeries, including abdominoplasty, belt lipectomy, brachioplasty, upper body lifts, and thigh reduction
- Discussion of techniques that significantly reduce seroma rates and effective treatment strategies to use when patients develop seromas
- High-quality preoperative and postoperative photos and illustrations enhance understanding of techniques and outcomes
This unique book is essential reading for all body-contouring surgeons. In addition to providing hands-on guidance from masters on how to surgically correct deformities related to massive weight loss, the book enhances understanding of morbid obesity and its associated physiologic and psychological health issues.

EDITORS
Fernando Corella, PhD, is Associate Professor, Department of Surgery, Complutense University, Madrid; and Hand Surgeon, Wrist and Hand Unit, Traumatology Service, University Hospital Quirónsalud Madrid, Madrid, Spain.

Carlos Heras-Palou, MD, FRCS (Tr & Orth), is Consultant Hand and Wrist Surgeon, Pulvertaft Hand Centre, Royal Derby Hospital, Derby, UK.

Riccardo Luchetti, MD, is a Private Practice Hand Surgeon, Rimini Hand Surgery and Rehabilitation Center, Rimini, Italy.

DESCRIPTION
An up-to-date, instructional resource on open and arthroscopic management of wrist injuries

Major advances have been made in the field of wrist surgery, including the use of arthroscopy and better rehabilitation protocols. In addition, understanding of proprioception has changed conservative management, often preventing surgery. Nevertheless, the assessment and management of a myriad of wrist dysfunctions remains daunting, due in part to complicated anatomy and mechanics and a lack of high-quality prospective clinical studies. Carpal Ligament Injuries and Instability: FESSH Instructional Course Book 2023 edited by renowned hand surgeons Fernando Corella, Carlos Heras-Palou, and Riccardo Luchetti covers the investigation, diagnosis, staging, and management of ligament injuries and the latest open and arthroscopic techniques to treat carpal instabilities.

The first two sections lay a solid foundation, with eight chapters encompassing anatomy and biomechanics, clinical and arthroscopic examination of the wrist, and imaging. Section three includes 10 chapters on scapholunate injury and instability, with discussion of open and arthroscopic repair, reinforcement, reconstruction, and resection techniques. Section four features five chapters on lunotriquetral injury and instability, including acute and chronic open and arthroscopic injury management. Section five includes four chapters on extrinsic ligament injuries, from perilunate injuries to staging and treatment of non-dissociative proximal row instability. The book concludes with a final section comprising two chapters on other types of injuries.

Key Highlights
- An impressive group of renowned global experts describe new treatment algorithms and surgical techniques
- Clinical pearls throughout the text provide guidance on preventing complications and improving outcomes
- A wealth of high-quality operative photos, imaging scans, illustrations, and videos enhance understanding of impacted anatomy and techniques
This resource provides trainees, surgeons, and therapists with current thinking and up-to-date evidence-based treatment for wrist ligament injuries and carpal instabilities, with the goal of improved patient outcomes.

Thieme Group
Returns Policy

Effective from 1st January 2009

All consignments by Thieme Publishers are delivered without any automatic returns authorization provision. All returns are governed by the following rules:

General Remarks
• For all returns, authorization is granted strictly at the discretion of the publisher, except for faulty, damaged or wrongly delivered titles (see below)
• The basic principle for returns in any one year is that these should not exceed 5% of the previous year’s net turnover for any one company
• The publisher does not guarantee to send back any products that are outside these returns rules and reserves the right to destroy these without compensation.
• Transport costs for returns are covered by the sender (except for Item 4)

1) Full credit can be granted only if
• prior permission to return has been requested and authorized
• the request for permission to return states invoice number, date, and reason for return
• returns are in mint condition, without defacing marks, stickers or security devices
• the request for return authorization is made at the latest twelve (12) months from invoice date
• returns are made directly to our warehouse address

2) No credit will be granted if products are
• returned without prior authorization
• not returned in a resalable condition as described above
• not accompanied by a delivery note listing invoice numbers and dates
• old or out-of-print editions returned more than three (3) months after publication of the new edition

3) No returns can be accepted or authorized
• if made or requested later than twelve (12) months from invoice date
• if made for the previous edition of a newly published work later than 3 months from publication date
• for offline electronic or audiovisual material for continuation orders, series orders and reduced-price or special priced books or sets
• for books with a selling price value (gross) of less than Euro 50.

4) No prior permission is required for
• imperfect copies
• wrongly delivered books (publisher’s error)
In such cases, please include invoice number, date, and reason for return.

For our full terms and conditions please go to
https://www.thieme.com/termsoftrade_partners
