An insightful video guide to minimally invasive cranial surgery from renowned global pioneers

During the last three decades, minimally invasive cranial (“keyhole”) surgery has proven to be an effective and safe approach that reduces postoperative patient recovery time and pain. Yet, aside from endoscopic endonasal surgery, a transcranial subset of procedures is not taught as standard practice in the majority of training programs around the world. *Video Atlas of Minimally Invasive Cranial Surgery: A Step-by-Step Approach* by minimally invasive neurosurgery experts Walter C. Jean, Franco Rubino, Ivo Peto, and Kunal Vakharia underscores the importance of incorporating groundbreaking approaches in the standard repertoire of contemporary neurosurgery and modernizing its teaching.

The book is organized by nine cranial regions, encompassing the orbit, sella/parasellar, anterior cranial fossa/circle of Willis, third ventricle, pineal, petrous apex, infratemporal fossa, retrosigmoid/lateral suboccipital, and clivus and craniocervical, followed by Part 10 that covers supratentorial approaches. Each of the chapters is consistently formatted with an introduction, followed by pertinent anatomy, brief case discussions with accompanying videos, operative setups, approach selection, exposure, key steps, and potential risks and avoidance strategies.

Key Highlights

- Features case studies from an impressive group of second- and third-generation MINS clinicians from around the globe
- Provides step-by-step guidance and surgical nuances throughout 34 videos
- Enhances understanding of complex anatomy via high-quality, annotated illustrations and MRI images

This unique resource provides a significant contribution to the advancement of MINS. It is an essential reference for every neurosurgery resident, fellow, and practitioner who is interested in furthering the ongoing evolution of MINS and standard of care in the field.

A comprehensive, problem-based guide to modern reconstructive surgery from renowned experts

Reconstructive Surgery: A Problem-Based Approach edited by Matthew M. Hanasono, Samir Mardini, Steven L. Moran, Michel H. Saint-Cyr, and Edward I. Chang fills a gap among plastic surgery textbooks. The book focuses on reconstructive surgery by region and is problem based, rather than a flap atlas or a superficial survey of general plastic surgery. The text covers the entire spectrum of reconstructive surgery, including reconstruction of the head and neck; breast, trunk, and pelvis; upper and lower extremities; and the lymphatic system.

Systemically organized by five regions, the book includes 52 chapters designed to be referenced prior to a consultation or surgical case. Each chapter is succinct, yet comprehensive, and written by world-renowned experts in the field. The authors discuss clinical decision-making using the best available evidence. This unique resource defines the current state of the art and reflects the camaraderie and mutual support that runs strongly within the field of reconstructive plastic surgery.

Key Highlights

- Contributions from the most prominent, accomplished reconstructive surgeons in the world
- Decades of accumulated experience distilled into pertinent anatomic knowledge, thoughtfully selected case examples, insightful pearls and pitfalls, and evidence-based treatment algorithms
- Ample operative color images and illustrations enhance acquisition of anatomic knowledge and approaches

This comprehensive, practical, and authoritative textbook provides an essential portable companion for all trainee and seasoned surgeons to consult in the clinic, operating room, or during late-night call.

The definitive guide to cutting-edge facial injection techniques—from leading experts

The number of nonsurgical facial enhancements has continued to skyrocket since the publication of the first edition of this bestselling textbook. Due to the growing demand for facial fillers, many physicians, nurses, and physician assistants now perform these procedures. *Cosmetic Injection Techniques: A Text and Video Guide to Neurotoxins and Fillers, Third Edition* by renowned facial plastic surgeons Theda C. Kontis and Victor G. Lacombe features new fillers and techniques that have been introduced since the publication of the acclaimed 2018 second edition.

This book is designed to augment the knowledge of beginner injectors and train experienced injectors on how to perform "finesse" injections. It encompasses 81 consistently formatted, reader-friendly chapters organized by eight sections, followed by six appendices. In each chapter, succinct paragraphs cover indications, anatomic considerations, injection techniques, precautions, postinjection instructions, risks, pearls, and additional reading. To accommodate various skill levels, the six appendices detail every injection technique in terms of difficulty for the trainer, risks involved, informed consent form for various techniques.

Key Features

- New topics include advanced techniques in facial sculpting with fillers and fat-dissolving agents, a dozen new fillers and neurotoxins, and a step-by-step guide on incorporating PRP/PRF into practice
- Diagrams and detailed full-color illustrations increase understanding of important anatomy
- Injection techniques demonstrated in 81, all-new professional videos optimize learning

This updated edition is a must-have resource for plastic surgeons, cosmetic surgeons, dermatologists, nurse injectors, and physician assistant/nurse practitioner injectors who wish to increase their knowledge of injection approaches, refine their skills, and achieve optimal patient outcomes.

A structured, must-have resource for neurosurgical residents at every stage of preparation

Neurosurgery Primary Board Review: Questions & Answers by Syed I. Khalid, Jonathan Citow, and esteemed contributors provides a high-yield, board-style Q&A format that spans foundational neuroscience through advanced clinical areas. The content aligns with core topics on the ABNS primary examination, including coverage of neuropathology, neuroanatomy, neurophysiology, neuro-oncology, spine, vascular, trauma/critical care, and ethics. The reader-friendly format transforms vast neurosurgical content into active-recall exercises that reinforce key concepts, sharpen clinical decision-making, and simulate exam-style conditions.

The eight consistently formatted chapters are organized by vascular/endovascular, neurooncology, spine, pediatric neurosurgery, functional/epilepsy, trauma/critical care, peripheral nerve, and core competencies. High-yield questions are followed by concise summaries, illustrative clinical vignettes, and first-rate radiographic and pathologic images. The layout is designed to enable quick acquisition of key facts prior to delving into detailed, evidence-based explanations.

Key Highlights

- Cements key concepts and sharpens clinical decision-making in real time with bite-sized scenarios
- Fosters deeper learning with clinical application of concepts and reasoning that delineates correct and incorrect answers
- Reinforces test-taking strategies and enhances operative preparedness by integrating clinical vignettes with clear radiographic images
- Enables readers to test their mastery, one ABNS exam topic and question at a time

This unique book provides the quintessential resource for every neurosurgical resident and neurosurgeon prepping to take the ABNS primary exam. It will also benefit neurosurgeons who need to review core topics prior to taking maintenance of certification exams.

The Go-to Reference for Acquisition of Neurosurgical Operative Knowledge

Traditional learning methods and static didactics are no longer sufficient in an era of rapidly advancing surgical tools and increasingly complex operative approaches. *Operative Fundamentals in Neurological Surgery* edited by Nitin Agarwal, Hanna N. Algattas, Edward G. Andrews, Kamil W. Nowicki, and Xiaoran Zhang fills a gap in the literature. The book provides a unique compilation of neurosurgical “cliff notes” to help residents and faculty acquire knowledge of the most frequent operations performed in neurosurgery – clearly, quickly, and efficiently.

This high-yield handbook reflects the depth and breadth of cases encountered during neurosurgical residency. Each chapter presents a focused snapshot of a single operative approach, summarizing key anatomical landmarks, positioning, steps, and technical considerations necessary for safe and effective execution. This resource provides a meaningful step forward on the path to becoming a capable, confident, and thoughtful neurosurgeon.

Key Highlights

- Addresses the demands of contemporary neurosurgical education, with clear and concise explanations and insightful procedural guidance
- Includes general and nuanced concepts from a highly accomplished group of neurosurgeons across all subspecialties
- Enhances understanding and the ability to perform procedures via videos

High-Yield Visual Learning Resource for Medical Students and Neurosurgical Residents

Neurosurgery Infographics edited by Nitin Agarwal and David T. Fernandes Cabral is a compilation of visual abstracts that enables quick review of high-yield neurosurgical topics. The one-stop, reader friendly guide fills a gap in the literature, sparing learners from navigating dense atlases and sprawling monographs. The unique book distills the vast and intricate complexities of neurosurgery into visuals that inform at a glance, while allowing a deeper dive into the narrative when needed.

This unique resource features over 100 peer-reviewed visual abstracts that focus on learning and retaining neurosurgical knowledge. Organized by the brain, spine, and peripheral nerves, the visuals and concise text cover the most common disorders and diseases treated by neurosurgeons. This is an essential companion for medical students navigating rounds, away rotations, sub-internships, and OR preparation. It doubles as an efficient, high-level refresher of core topics for practicing neurosurgeons.

Key Highlights

- Visual summaries designed to prompt memory, comprehension, and application.
- Infographics meticulously curated and vetted through peer review reflect rigorous scholarship.
- High-quality images and embedded videos enable quick acquisition of vital information.

This ideal reference for medical students and junior neurosurgical residents will also benefit advanced practice providers.

Prep for breast imaging on radiology board exams with case-driven learning and expert insights

Breast imaging plays a pivotal role in the early detection, diagnosis, and management of breast cancer—the most common malignancy among women worldwide. *Breast Imaging Q&A for the Radiology Boards*, written by fellowship-trained academic breast radiologists Diana L. Lam, Elizabeth M. Valencia, Matthew D. Phelps, and trainees, is designed to help radiology residents and fellows prepare for radiology board exams. The image-rich resource provides a structured, exam-focused review that mirrors the questions and topics encountered on both the written and oral exams.

This unique book enhances understanding of breast imaging modalities, while providing the ability to apply standardized terminology, interpret complex findings, and navigate regulatory frameworks. One hundred case-based chapters condense complex breast imaging concepts into clear explanations paired with high-yield questions. This approach helps readers identify knowledge gaps and reinforce critical points efficiently. The text bridges the gap between theory and practice with high-quality images, detailed explanations, key teaching points, and evidence-based recommendations.

Key Features

- Thoughtfully curated cases reflect real-world scenarios encountered in clinical practice
- Detailed explanations and references reinforce understanding of core concepts
- Comprehensive coverage of breast imaging modalities and topics ensures thorough preparation of exam-relevant material

This trusted radiology companion provides a practical, case-based review that will help radiology residents and fellows improve breast imaging knowledge, develop confidence and competence, and improve board exam performance.
