Dortmund Airport Cargo Service

Brief description, as at 01/2016

Dortmund Airport Cargo Service represents more than 40 international airlines and unites the relevant logistic system partners under one roof. Some 6000 tons of freight are handled here annually. As a certified, regulated agent with its own control technology, Dortmund has been in a position to ensure air freight safety since April 2013.

Through its services relating to cargo shipment, the Ruhr airport connects the region with the world, ensuring that even medium-sized and small companies benefit from this smooth-running import and export facility. In order to ensure trouble-free operation, all of the partners in the delivery chain based at the Dortmund Airport Air Cargo Centre work in close cooperation: air freight forwarders, airlines, customs and Dortmund Airport Cargo Service.

In the core aviation business, Dortmund Airport offers travellers connections with 10 airlines to some 40 destinations in 15 European countries. Via the Munich hub, numerous other European and intercontinental destinations can also be reached. Almost 2 million passengers used the airport in 2015, making it the third-largest airport in North Rhine-Westphalia.
