

GuideU

The leading non-electrical
floor path marking solution

GuideU

The leading non-electrical floor path marking system

GuideU 1000-Series is the next-generation non-electrical floor path marking system, using photoluminescent strips to guide passengers to the exits in the event of a cabin lighting failure.

GuideU 1000-Series is available in many different colors that can be optimally integrated into any cabin design. Fillers in various heights allow adapting the light strip assembly height to different carpets. An optional carpet protector can be used in order to protect the carpet edges against damage.

Providing curves and lines of any shape, the option GuideU ColourCurve follows the individual contours of your cabin design. Already available on new Airbus aircraft, the by Lufthansa Technik patented curved GuideU variant is now a standard in our portfolio.

In 2016, Lufthansa Technik has introduced a new option for GuideU 1000-Series called GuideU CustomFit. The latest innovation integrates the structural design of the chosen carpet into the surface of the photoluminescent strip, making it virtually disappear under standard lighting conditions. Also new colors in corporate design or airline logos can be developed and used for the light strips. Every new light strip is designed individually and fully customized.

GuideU CurvedCustomFit is the next enhancement of the market leading non-electrical floor path marking system. These photoluminescent strips are the perfect synergy between the innovative products GuideU CustomFit and GuideU ColourCurve. The effect is outstanding: perfectly blending with the surrounding carpet both in form, color and structure, the highest demands of designers are reached. Curved CustomFit, following any curvature and in the same time integrating the floor covering design, has received the Red Dot Award 2017.

GuideU has become the standard for all commercial aircraft. GuideU 1000-Series is factory-fitted by Airbus, Boeing and Bombardier. Retrofit installations are covered by Lufthansa Technik supplemental type certificates (STC) available for most commercial aircraft.

Lufthansa Technik is licensed under patents owned by STG Aerospace.

winner 2017**

Customer advantages

- No life limit
- No maintenance
- No power required
- FAA/EASA-approved
- Light weight
- Curved shapes
- Cuttable on board
- Many different colors
- One-piece system
- Fully customizable

GuideU 1000-Series Colors

Natural
Ocean Tint
Glacier Blue
Dark Yellow
Special Amber
Silver Grey
Emerald Green
Indigo
Turquoise
Spring Green
Purple Dawn
Tulip Purple
Pink Corinne
Jasmine
Royal Blue
Silky Silver
Titanium Grey
Cream Brown
Sunny Orange
Desert Brown
