GuideU

Lighting the way

GuideU is the most elegant and innovative floor path marking system available for aircraft cabins. Its photoluminescent strips are easy to install, lightweight, and work completely electricity-free. Additionally, this patented technology "Made in Germany" is 100% customizable in color and shape making it the trusted choice for all commercial aircraft.

GuideU is the next generation of non-electrical floor path marking systems. In the event of an emergency when cabin lighting fails, these photoluminescent strips guide passengers reliably to the exits. GuideU quickly recharges during normal cabin lighting and is even faster to install. No special tools are needed during the fitting of the strips that can simply be cut to length at the installation site.

Benefits

No maintenance intervals and no life limitation

Non electrical

Easiest installation on the market

Cutable on board

Patent capsulated system makes sealant or end caps obsolete

One-piece system that reduces logistic expenses

Lightweight

Scratch protection

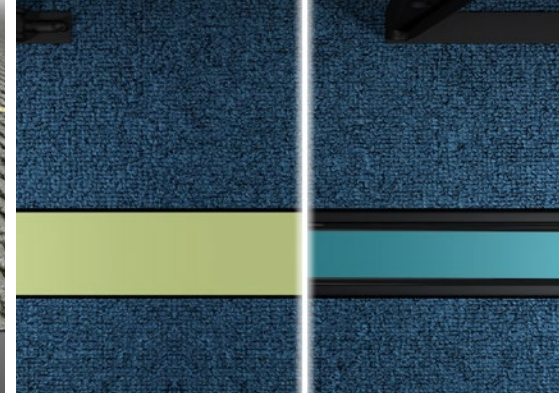

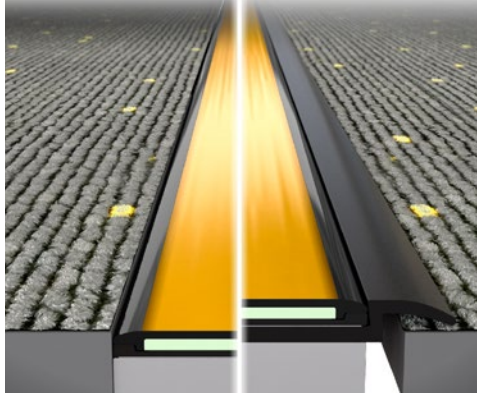

FAA/EASA approved

Validated by most local authorities

Fully customizable

Lufthansa Technik

GuideU is available in a wide range of colors so it blends smoothly into your existing cabin design.

Fillers in various heights allow adapting the light strip assembly height to different carpets.

An optional carpet protector can be used in order to protect the carpet edges against damage.

The smart adapter allows customers to upgrade their floor path marking from an old system to the GuideU 1000-Series.

Cut and glow

It doesn't take much to replace your old floor path marking system and install GuideU.

1 Cut

Cut the strips with our special GuideU scissors – straight and diagonally possible.

2 Remove

Remove the protective foil of the double-sided tape from the backside of the strips.

3 Fix

Fix the strips with light pressure.

Ready! Marvel at your precise and fast work.

Customize your strip

With its highly individual design options, GuideU goes beyond the mere functionality of an ordinary emergency system.

- GuideU can be 100% customized to the individual curves in both galleys and carpeted cabin areas.
- Our CustomFit technology integrates the structure and design of the chosen carpet into the surface of the strip, making it almost invisible under normal lighting conditions.
