

ADDITIVE Manufacturing

When parts are missing,
print solutions.

ADDITIVE Manufacturing combines long-term knowledge in the design, production and certification of aircraft parts (21G+21J) with innovative new technologies. Based on decades of experience in the aviation industry, we offer our customers state-of-the-art, durable and sustainable products. Our product portfolio ranges from customized solutions to off-the-shelf products – from engineering, design, to the final, certified product.

Our customized ADDITIVE Manufacturing product solutions meet the needs of airline customers by easily accommodating complex designs and/or low volumes. The use of 3D printing methods reduces production costs and lead times while providing sustainable and durable solutions. No initial, one-time investment in specialized tooling or fixturing results in a low barrier to entry for low-volume or infrequently used parts. We provide spare parts that are no longer available on the market or have limited availability.

Benefits

Market intelligence and insight

Detailed understanding of the product lifecycle of aircraft parts

Design Organization (21J)

Production Organization (21G) with worldwide manufacturing network

Consulting and guidance

Easy realization of complex designs

Production of spare parts that are no longer available on the market or have limited availability

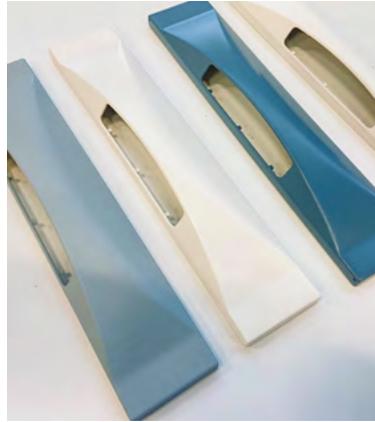

Sustainable and more long-lasting solutions

Lufthansa Technik

As a reliable partner and supplier, we offer advice and guidance. All aircraft types can benefit from 3D printed parts from our Design Organization 21J, Production Organization 21G with global manu-

facturing network, market intelligence and insight. Our 3D printing knowledge and experience provide a detailed understanding and expertise of the product lifecycle of aircraft parts.

ADDITIVE Manufacturing combines knowledge, innovation and passion in the field of 3D printing.

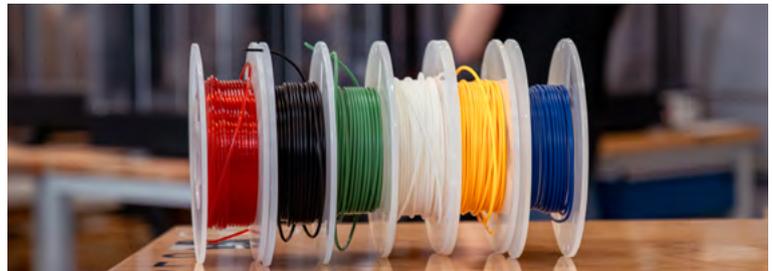

We are experts in ADDITIVE Manufacturing.

We offer bespoke product solutions for aircraft parts.

We create added value through customized solutions, quickly and cost-effectively, for single or serial products.

Thousands of aircraft parts have already been developed, produced and installed.

All aircraft types can benefit from our additive manufactured parts.
