## Certificate

Standard | ISO/IEC 27001:2022

Certificate Registr. No. 01 153 2200605

> Lufthansa Technik AG Weg beim Jäger 193 22335 Hamburg Germany

including the locations according to annex

Scope: Engineering services and AVIATAR solutions, design of changes

and repairs, maintenance of aircraft, engines and aircraft components of commercial, governmental and special aircraft operators, integrated logistic services for technical goods and spare parts, maintenance training and examination organisation

and central functions.

SoA: 2025.01.28

Proof has been furnished by means of an audit that the

requirements of ISO/IEC 27001:2022 are met.

Validity: The certificate is valid from 2023-04-30 until 2026-04-29.

First certification 2020

	A 6.6	Confidentiality or non-disclosure agreements	communicated to relevant personnel and other interested parties.  Confidentiality or non-disclosure agreements reflecting the organization's needs for the protection of information should be identified, documented, regularly reviewed and signed by personnel and other relevant interested	Yes	Risk treatment	Implemented		
	A 6.7	Remote working	parties.  Security measures should be implemented when personnel are working remotely to protect information accessed, processed or stored outside the	Yes	Risk treatment	Implemented		
			organization's premises.					

v2.1 28.01.2025

	A 6.8	Information security event reporting	The organization should provide a mechanism for personnel to report observed or suspected information security events through appropriate	Yes	Risk treatment	Implemented
	A 7.1	Physical security perimeters	channels in a timely manner.  Security perimeters should be defined and used to protect areas that	Yes	Risk treatment	Implemented
	A 7.2	Physical entry	contain information and other associated assets.  Secure areas should be protected by appropriate entry controls and access	Yes	Risk treatment	Implemented
	A 7.3	Securing offices, rooms and facilities	points. Physical security for offices, rooms and facilities should be designed and	Yes	Risk treatment	Implemented
	A 7.4	Physical security monitoring	implemented. Premises should be continuously monitored for unauthorized physical	Yes	Risk treatment	Implemented
		Protecting against physical and	access.  Protection against physical and environmental threats, such as natural			
A.7 Physical Controls	A 7.5	environmental threats	disasters and other intentional or unintentional physical threats to infrastructure should be designed and implemented.	Yes	Risk treatment	Implemented
	A 7.6	Working in secure areas	Security measures for working in secure areas should be designed and implemented.	Yes	Risk treatment	Implemented
	A 7.7	Clear desk and clear screen	Clear desk rules for papers and removable storage media and clear screen rules for information processing facilities should be defined and appropriately enforced.	Yes	Risk treatment	Implemented
	A 7.8	Equipment siting and protection	To reduce the risks from physical and environmental threats, and from unauthorized access and damage.	Yes	Risk treatment	Implemented
	A 7.9	Security of assets off-premises	Off-site assets should be protected.  Storage media should be managed through their life cycle of acquisition,	Yes	Risk treatment	Implemented
	A 7.10	Storage media	use, transportation and disposal in accordance with the organization's classification scheme and handling requirements.	Yes	Risk treatment	Implemented
	A 7.11	Supporting utilities	Information processing facilities should be protected from power failures and other disruptions caused by failures in supporting utilities.	Yes	Risk treatment	Implemented
	A 7.12	Cabling security	Cables carrying power, data or supporting information services should be protected from interception, interference or damage.	Yes	Internal requirements	Implemented
	A 7.13	Equipment maintenance	Equipment should be maintained correctly to ensure availability, integrity and confidentiality of information.	Yes	Risk treatment	Implemented
	A 7.14	Secure disposal or re-use of equipment	Items of equipment containing storage media should be verified to ensure that any sensitive data and licensed software has been removed or securely overwritten prior to disposal or re-use.	Yes	Risk treatment	Implemented
	A 8.1	User endpoint devices	Information stored on, processed by or accessible via user endpoint devices should be protected.	Yes	Risk treatment	Implemented
	A 8.2	Privileged access rights	The allocation and use of privileged access rights should be restricted and managed.	Yes	Risk treatment	Implemented
	A 8.3	Information access restriction	Access to information and other associated assets should be restricted in accordance with the established topic-specific policy on access control.	Yes	Risk treatment	Implemented
	A 8.4	Access to source code	Read and write access to source code, development tools and software libraries should be appropriately managed.	Yes	Risk treatment	Implemented
	A 8.5	Secure authentication	Secure authentication technologies and procedures should be implemented based on information access restrictions and the topic-specific policy on	Yes	Risk treatment	Implemented
	400		access control.  The use of resources should be monitored and adjusted in line with current	V	Diele terreterent	
	A 8.6 A 8.7	Capacity management	and expected capacity requirements.  Protection against malware should be implemented and supported by	Yes Yes	Risk treatment	Implemented Implemented
		Protection against malware  Management of technical	appropriate user awareness.  Information about technical vulnerabilities of information systems in use			
	A 8.8	vulnerabilities	should be obtained, the organization's exposure to such vulnerabilities should be evaluated and appropriate measures should be taken. Configurations, including security configurations, of hardware, software,	Yes	Risk treatment	Implemented
	A 8.9	Configuration management	services and networks should be established, documented, implemented, monitored and reviewed.	Yes	Risk treatment	Implemented
	A 8.10	Information deletion	Information stored in information systems, devices or in any other storage media should be deleted when no longer required.	Yes	Risk treatment	Implemented
	A 8.11	Data masking	Data masking should be used in accordance with the organization's topic- specific policy on access control and other related topic-specific policies, and business requirements, taking applicable legislation into consideration.	Yes	Risk treatment	Implemented
	A 8.12	Data leakage prevention	Data leakage prevention measures should be applied to systems, networks and any other devices that process, store or transmit sensitive information.	Yes	Risk treatment	Implemented
	A 8.13	Information backup	Backup copies of information, software and systems should be maintained and regularly tested in accordance with the agreed topic-specific policy on backup.	Yes	Risk treatment	Implemented
	A 8.14	Redundancy of information processing facilities	Information processing facilities should be implemented with redundancy sufficient to meet availability requirements.	Yes	Risk treatment	Implemented
	A 8.15	Logging	Logs that record activities, exceptions, faults and other relevant events should be produced, stored, protected and analysed.	Yes	Risk treatment	Implemented
A.8 Technological	A 8.16	Monitoring activities	Networks, systems and applications should be monitored for anomalous behaviour and appropriate actions taken to evaluate potential information security incidents.	Yes	Risk treatment	Implemented
Controls	A 8.17	Clock synchronization	The clocks of information processing systems used by the organization should be synchronized to approved time sources.	Yes	Risk treatment	Implemented
	A 8.18	Use of privileged utility programs	The use of utility programs that can be capable of overriding system and application controls should be restricted and tightly controlled.	Yes	Risk treatment	Implemented
	A 8.19	Installation of software on operational systems	Procedures and measures should be implemented to securely manage software installation on operational systems.	Yes	Risk treatment	Implemented
	A 8.20	Networks security	Networks and network devices should be secured, managed and controlled to protect information in systems and applications.	Yes	Risk treatment	Implemented
	A 8.21	Security of network services	Security mechanisms, service levels and service requirements of network services should be identified, implemented and monitored.	Yes	Risk treatment	Implemented
	A 8.22	Segregation of networks	Groups of information services, users and information systems should be segregated in the organization's networks.	Yes	Risk treatment	Implemented
	A 8.23	Web filtering	Access to external websites should be managed to reduce exposure to malicious content.	Yes	Risk treatment	Implemented
	A 8.24	Use of cryptography	To ensure proper and effective use of cryptography to protect the confidentiality, authenticity or integrity of information according to business and information security requirements, and taking into consideration legal, statutory, regulatory and contractual requirements related to cryptography.	Yes	Risk treatment	Implemented
	A 8.25	Secure development life cycle	Rules for the secure development of software and systems should be established and applied.	Yes	Risk treatment	Implemented
	A 8.26	Application security requirements	Information security requirements should be identified, specified and approved when developing or acquiring applications.	Yes	Risk treatment	Implemented
	A 8.27	Secure system architecture and engineering principles	Principles for engineering secure systems should be established, documented, maintained and applied to any information system development activities.	Yes	Risk treatment	Implemented
	A 8.28	Secure coding	Secure coding principles should be applied to software development.  Security testing processes should be defined and implemented in the	Yes	Risk treatment	Implemented
	A 8.29	Security testing in development and acceptance	development life cycle.	Yes	Risk treatment	Implemented
	A 8.30	Outsourced development	The organization should direct, monitor and review the activities related to outsourced system development.	Yes	Risk treatment	Implemented
	A 8.31	Separation of development, test and production environments	Development, testing and production environments should be separated and secured.	Yes	Risk treatment	Implemented
	A 8.32	Change management	Changes to information processing facilities and information systems should be subject to change management procedures.	Yes	Risk treatment	Implemented
	A 8.33	Test information	Test information should be appropriately selected, protected and managed.	Yes	Risk treatment	Implemented
	A 8.34	Protection of information systems during audit testing	Audit tests and other assurance activities involving assessment of operational systems should be planned and agreed between the tester and appropriate management.	Yes	Risk treatment	Implemented
