

## EMYNOS final demonstration

### Bucharest, Romania - January 31<sup>st</sup> 2018

After three years of progress and promising results, the EMYNOS project is now coming to an end. At the occasion of three pilots, respectively held in Poland, Turkey and Austria, project partners successfully demonstrated the integration of EMYNOS with existing legacy systems, through a variety of scenarios such as:

- Pure NG112 calls with caller location, audio, video, Real Time Text, and sensor data
- Emergency calls from assistive technologies and haptic devices
- Emergency calls over satellite
- NG112 calls towards emergency legacy systems

The above mentioned functionalities in addition to others, will be shown as one bundle at the final EMYNOS pilot that will take place in Bucharest, Romania on the 31st of January 2018. It is foreseen that this pilot will be:

- a starting point for further activities in the context of research, development, integration, and testing of Next Generation emergency services
- an incentive to the regulators and end users to respectively enforce the necessary policies and speed up the deployment of such service

**This is an open demonstration, if you wish to participate, please contact [secretariat@psc-europe.eu](mailto:secretariat@psc-europe.eu)**

**This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 653762**
