

EUROPEAN SECURITY CERTIFICATION WORKSHOP

The project's workshop on European Security Certification was held in Brussels in September 2018. Experts from different backgrounds attended the event including representatives of highly-renowned companies, such as Microsoft, SAP and Huawei. The aim of the workshop was to increase awareness of the EU-SEC Project, with focus on the game-changing development of the **Multiparty Recognition Framework**.

Lively discussions took place on the state of **cloud compliance** in Europe, **cyber security** threats and especially the need for a framework which supports the idea of assessing which existing cloud compliance scheme has equivalent requirements to be certified (such as BSI C5, CSA STAR, ISO27001, SOC 2).

Further workshops will take place in 2019. Sign up for updates!

BENEFITS OF MPRF

- IMPROVES USER TRUST
- INCREASES AWARENESS OF SECURITY REQUIREMENTS
- RAISES CONFIDENCE IN SECURITY CERTIFICATION
- INCREASES TRANSPARENCY
- COMPLEMENTS TRADITIONAL AUDITING & CERTIFICATION METHODS

ENHANCING THE CLOUD CONTROL MATRIX

Cloud Security Alliance Publishes Enhancement to Cloud Control Matrix

The Cloud Security Alliance (CSA) is a member of the EU-SEC project and contributes its comprehensive knowledge of cloud computing and certification.

The **Cloud Controls Matrix** (CCM) is a baseline set of security controls created by the Cloud Security Alliance to help enterprises assess the risk associated with a cloud computing provider.

The recently published C5 Addendum contains additional controls that serve to bridge the gap between CCM and the German Federal Office for Information Security (BSI) Compliance Controls Catalogue (C5).

The work on C5 addendum was largely done in the context of the EU-SEC project,

“Organizations will find this document useful for their cloud security compliance programs,” Daniele Catteddu, CTO at Cloud Security Alliance
