5G PLAYGROUND: A COMMON TESTBED FOR THE 5G R&D EVOLUTION

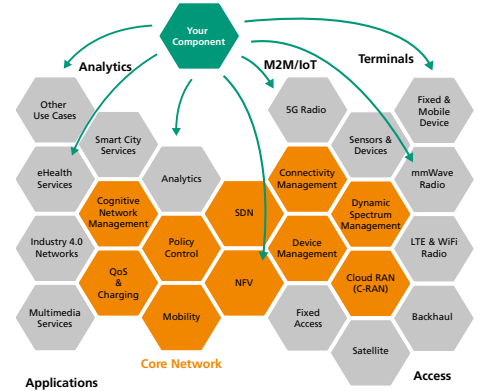

The next generation of mobile networks is taking shape now. Aiming to accelerate the network evolution and the adoption of the 5G technology, Fraunhofer FOKUS has set up the 5G Playground.

The 5G Playground is a live R&D testbed where researchers and engineers around the world are able to bring their own prototypes and build together the 5G environment.

It enables the evaluation, validation, interoperability and demonstration in a comprehensive environment, for new ideas, prototypes and solutions.

The playground platform is composed of practical toolkits facilitating the immediate acquisition of relevant results:

- Open5GCore (www.open5gcore.net)
- OpenSDNCore (www.opensdncore.org)
- Open5G-MTC (www.open5gmtc.org)

Fraunhofer FOKUS is actively searching for operator, vendor or academia partners, interested in building-up of the emerging 5G ecosystem. The 5G Playground is the right place to validate, demonstrate and calibrate your concepts, prototypes or solutions.
