The state of CMS in 2019

Headless, JAMstack and ReactJS – or: If your Content Marketing doesn't work, maybe just your Content Management System is shit.

73,2 %

73,2 %

of 40,000+ WordPress Websites in Alexas Top 1 Million suffer from vulnerabilities which can be detected using free automated tools.

www.wpwhitesecurity.com/statistics-70-percent-wordpress-installations-vulnerable/

Out of 42,106 WordPress websites in Alexa's top 1 million websites…

- 769 websites (1.82%) are still running a subversion of **WordPress 2.0**.
- **Only 1,785 websites upgraded** to version 3.6.1 between the 12th and the 15th of September 2013.
- **30,823 WordPress websites out of 42,106 (=73,2%)** are exposed to exploitable vulnerabilities.

WordPress Version (Top 10)	No. of Installations	No. of Known Vulnerabilities
3.6	13,034	**5**
3.6.1 (latest)	7,814	**0**
3.5.1	6,859	**8**
3.5.2	4,031	**0**
3.4.2	2,204	**12**
3.5	1,655	**10**
3.3.1	820	**24**
3.2.1	820	**10**
3.3.2	732	**14**
3.4	295	**15**

www.wpwhitesecurity.com/statistics-70-percent-wordpress-installations-vulnerable/

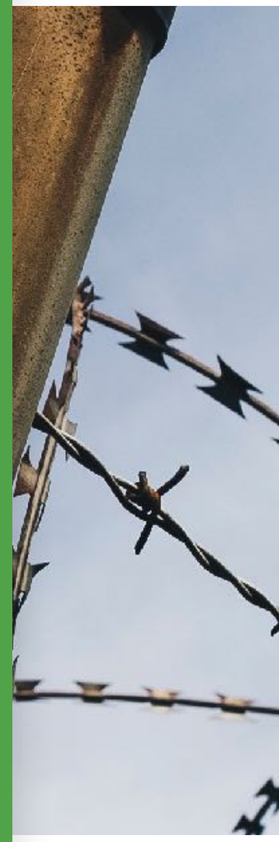
… and we're not even talking about **plugins** here.

7h

7h

Automated attacks began compromising Drupal 7 websites that were **not patched or updated within hours of the announcement.**

You should proceed under the assumption that **every Drupal 7 website was compromised** unless updated or patched before Oct 15th 2014, 11pm UTC, that is **7 hours after the announcement.**



www.drupal.org/forum/newsletters/security-public-service-announcements/2014-10-29/drupal-core-highly-critical

115.000

115.000

Websites unpatched 2 months after **Drupalgeddon 2** on March 28th, 2018.

Attackers are able to carry out a **full site takeover of any Drupal customer**, e.g. to install a malicious backdoor and execute arbitrary commands on the server.

research.checkpoint.com/uncovering-drupalgeddon-2/

… only

28 days

later, on April 25th, 2018

5h

5h

Five hours after the Drupal team published a security update for the Drupal CMS, hackers are actively **exploiting it in the wild.**

Two hours after the first in-the-wild attacks were reported, an **exploit was posted on Pastebin.**

www.bleepingcomputer.com/news/security/hackers-dont-give-site-owners-time-to-patch-start-exploiting-new-drupal-flaw-within-hours/

A lot of Reasons why …

- Improper deployment
- Security configuration issues
- A lack of security knowledge or resources
- Lack of resources to migrate to newer CMS versions
- Overall site maintenance by webmasters
- Broken authentication and session management
- Issues with backwards compatibility
- Most notorious threats to CMS' stem from vulnerabilities introduced by add-on modules, plugins, themes, and extensions.

sucuri.net/reports/2018-hacked-website-report#

Clearly, we have a problem with security and CMSes.

But let's talk about something different.

78%

78%

of users felt **stress or anger** while using a slow website.

www.oreilly.com/library/view/time-is-money/9781491928783/ch01.html

71 %

feel **regularly inconvenienced by slow websites**

70 %

state their performance-related **stress or anger has increased**, over the years

50 %

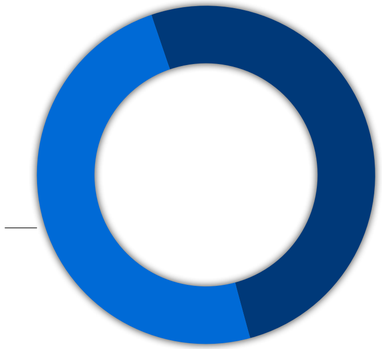
believe **websites have not improved in speed** or became slower

39 %

have decided **not to visit a company again** as a result of experiencing a slow website

49 %

expect **load times of 2 seconds** or less



18 %

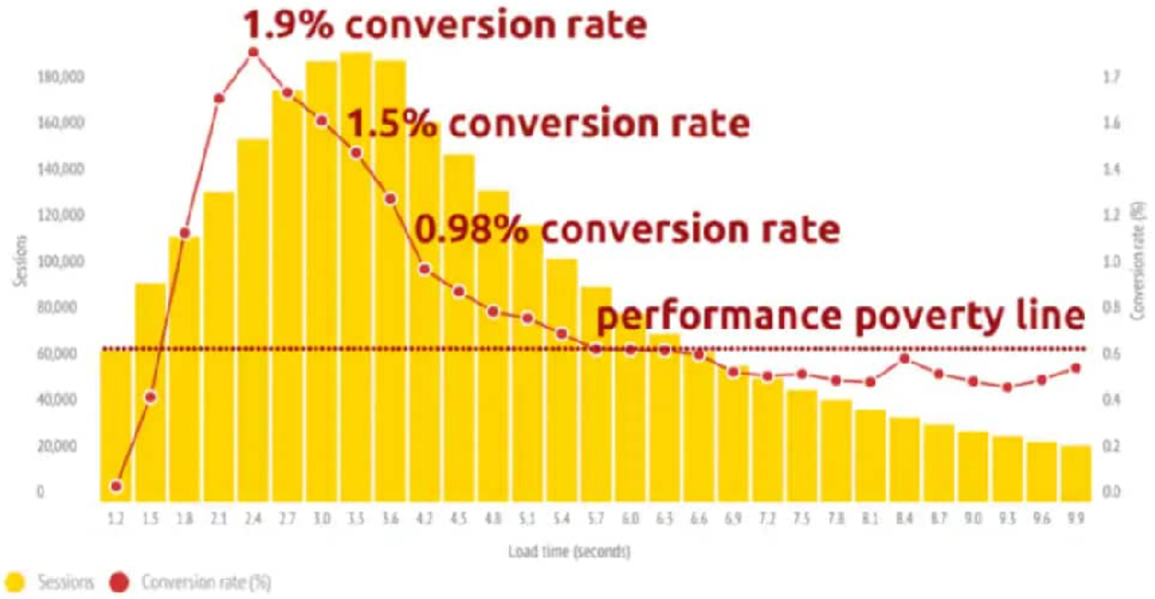
expect pages to **load instantly**

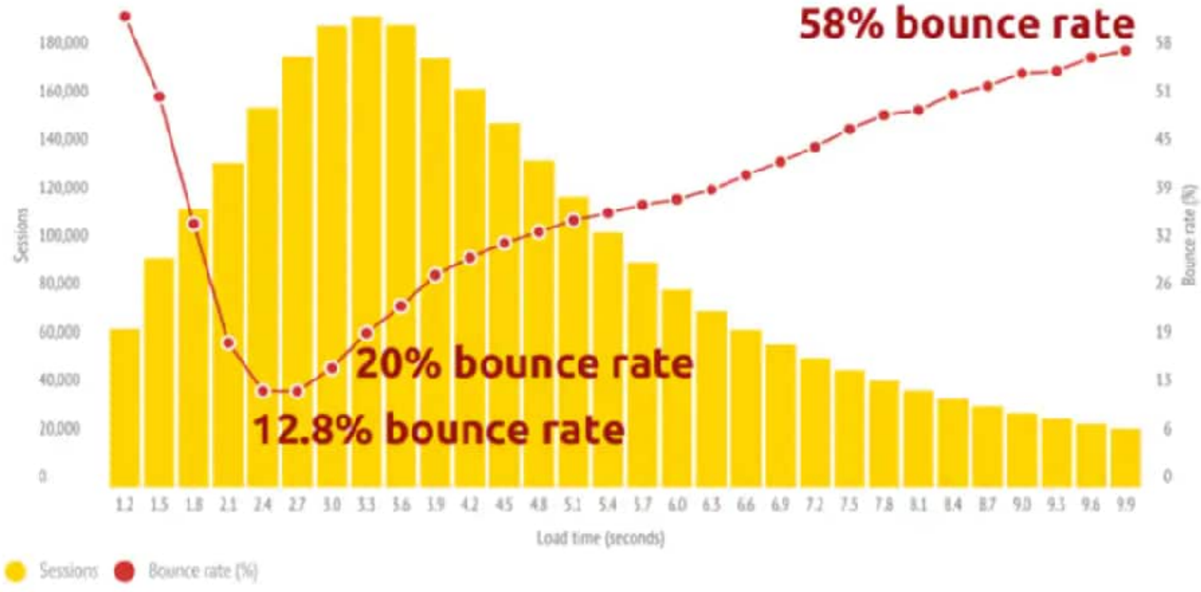
www.oreilly.com/library/view/time-is-money/9781491928783/ch01.html

"Performance is about
retaining users and improving conversions."

developers.google.com/web/fundamentals/performance/why-performance-matters/

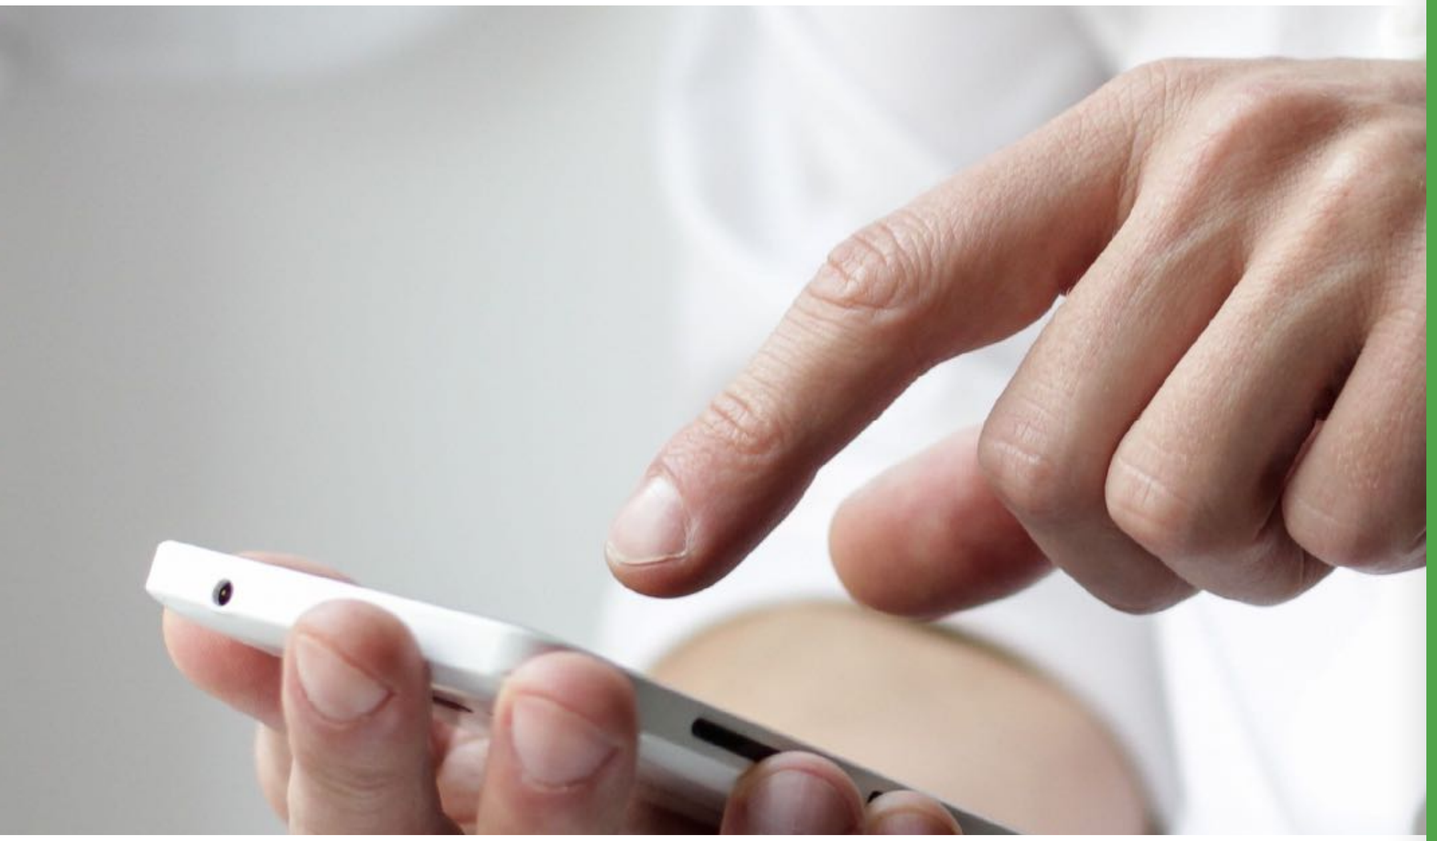
1-second improvement correlated to a 27% increase in conversion rate





https://developer.akamai.com/blog/2015/09/01/mobile-web-performance-monitoring-conversion-rate

53%



53%

of mobile site visits were abandoned if a page took longer than 3 seconds to load.

0%

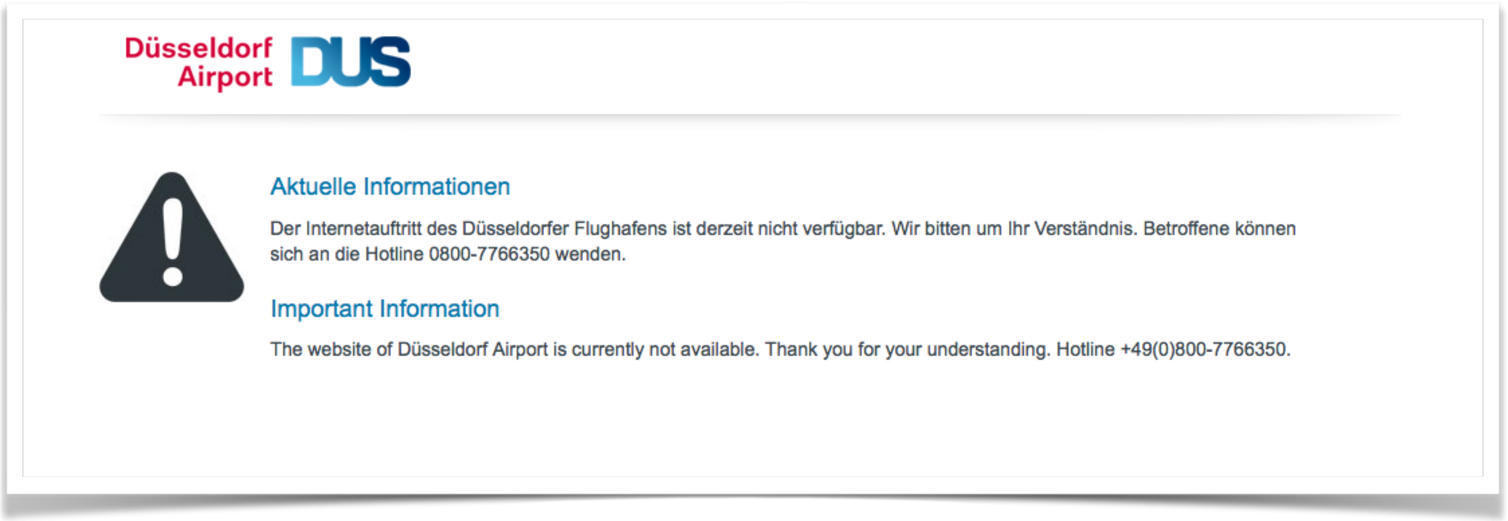
of all website visitors could get information about 4U9525
on **germanwings.com** or **dus.com**



www.itv.com/news/update/2015-03-24/germanwings-website-down-following-incident/

During a crisis, speculation, opinions, conspiracy theories, rumours and facts will be tossed around.

Company websites and company social media accounts are some of **the first places the media and the public turn to** for the latest news and updates on a crisis.

It's really important that a crisis communications strategy exists and that **websites are crisis ready**.

These sites **must be able to handle a dramatic increase in digital traffic**. Germanwings' website went down when news broke of the incident and **remained unavailable for some time**. It was unfortunate as they were **referring audiences to their website** for updates via social media.

With the **current common CMS technology** available …

(… we call it legacy …)

Building **secure** sites is hard!

Deep knowledge of back-end security patterns required.

Building **reliable** sites is hard!

Deep knowledge of scalability and global fail-over patterns required.

Building performant sites is hard!

Deep knowledge of browsers, network and back-end-performance required.

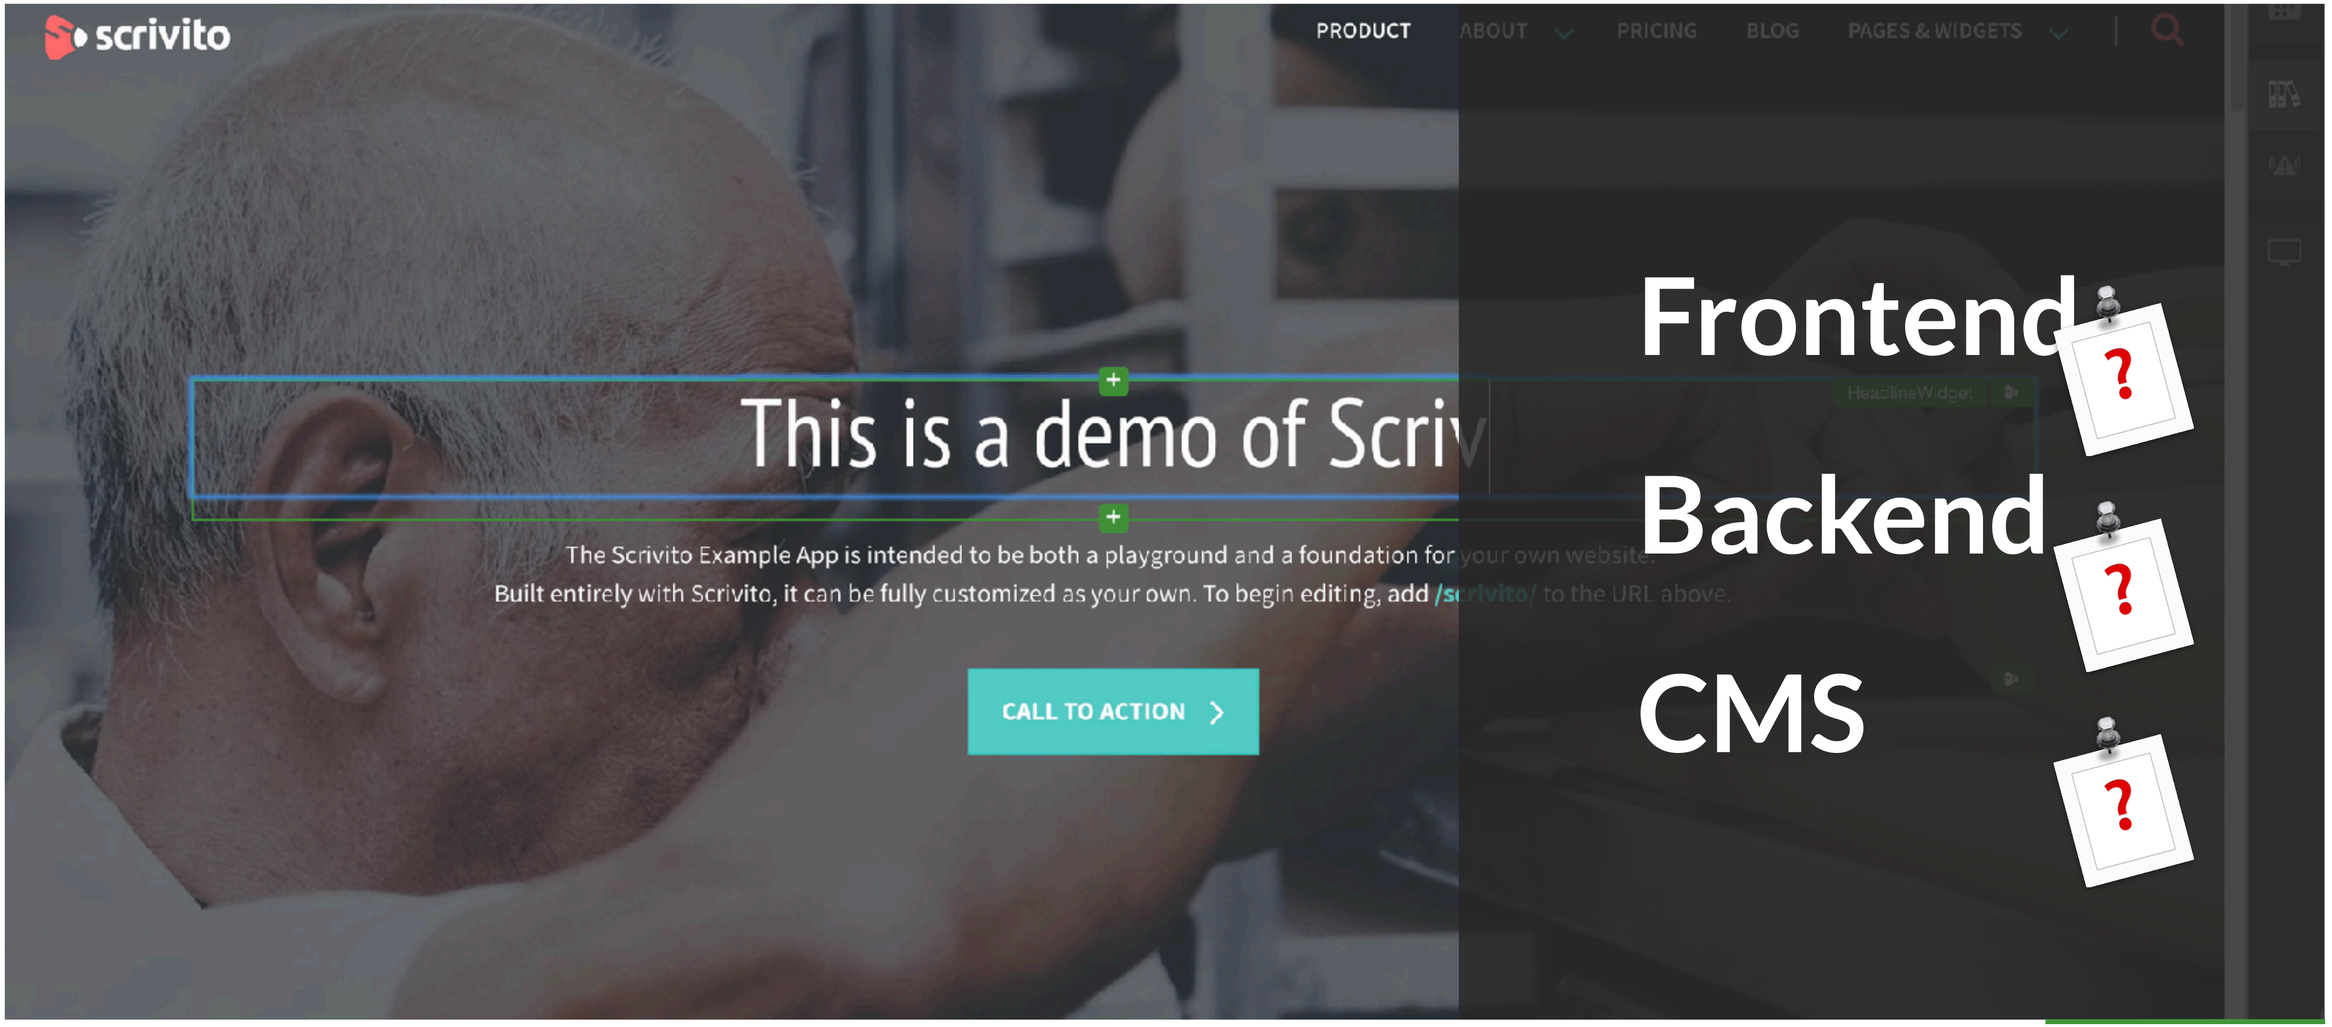
… and we even didn't talk about

usability for the editors

How did we **get there**?

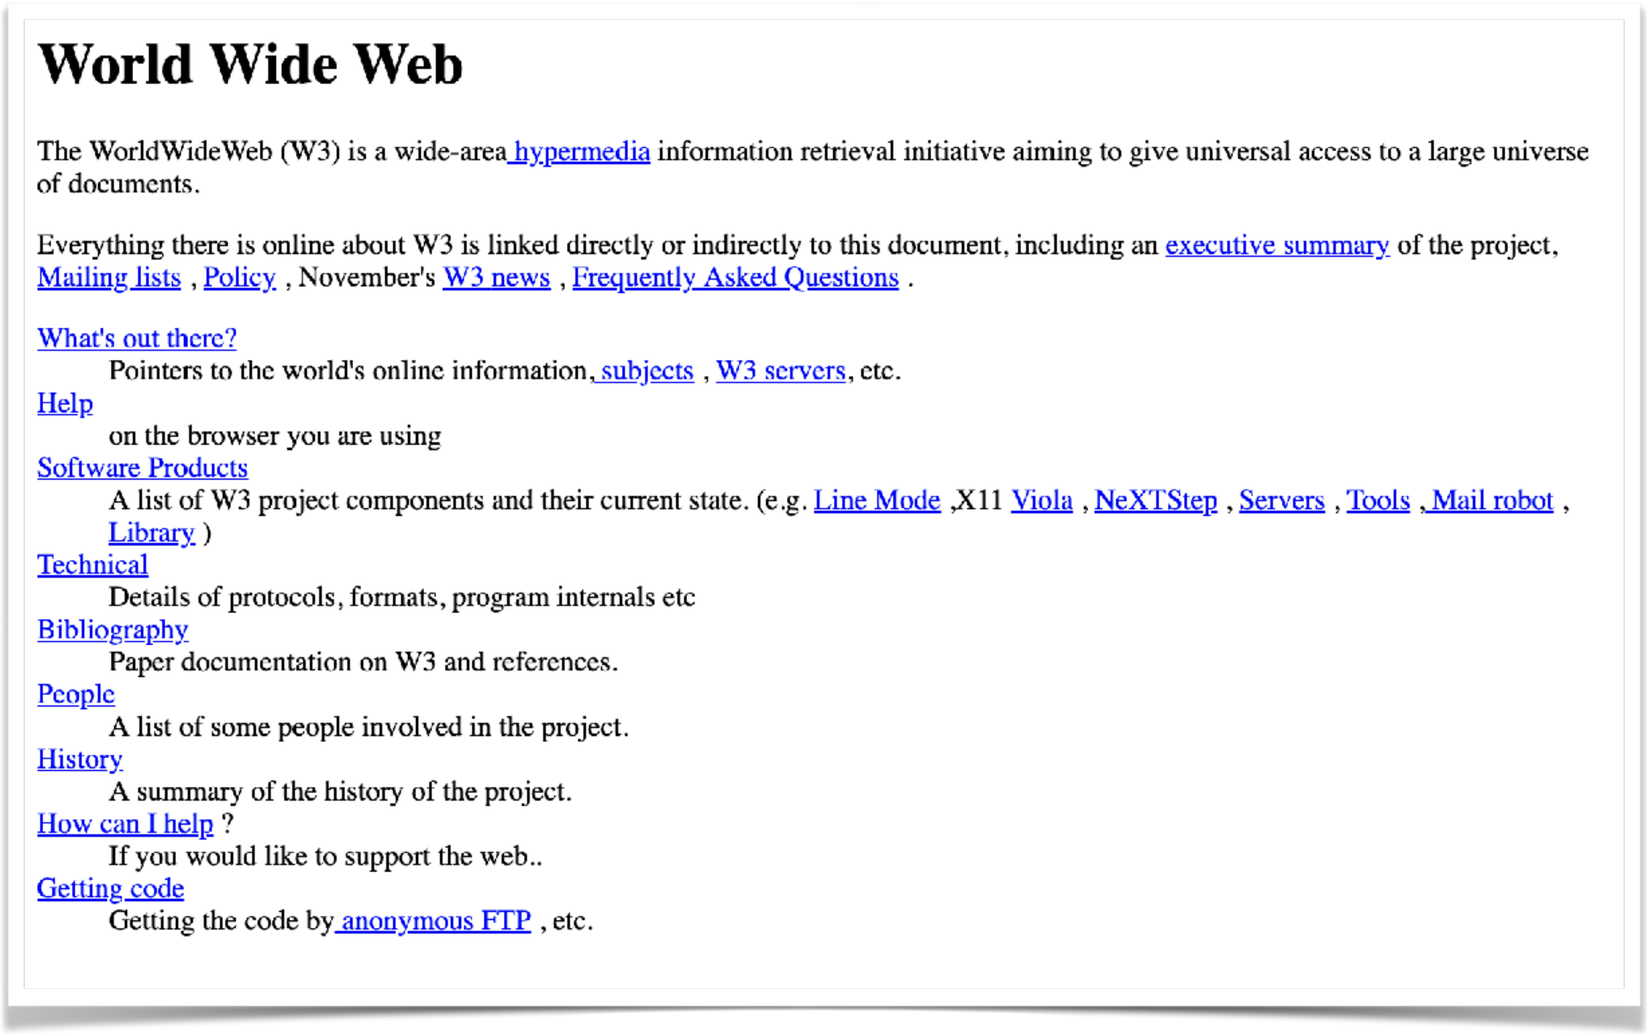
… and how do we **solve** this?

We need a new approach how to build web-sites



The **old** stack:
A Brief History of **web technologies**

The first web-site



World Wide Web

The WorldWideWeb (W3) is a wide-area hypermedia information retrieval initiative aiming to give universal access to a large universe of documents.

Everything there is online about W3 is linked directly or indirectly to this document, including an executive summary of the project, Mailing lists , Policy , November's W3 news , Frequently Asked Questions .

What's out there?
Pointers to the world's online information, subjects , W3 servers, etc.
Help
on the browser you are using
Software Products
A list of W3 project components and their current state. (e.g. Line Mode ,X11 Viola , NeXTStep , Servers , Tools , Mail robot , Library)
Technical
Details of protocols, formats, program internals etc
Bibliography
Paper documentation on W3 and references.
People
A list of some people involved in the project.
History
A summary of the history of the project.
How can I help ?
If you would like to support the web..
Getting code
Getting the code by anonymous FTP , etc.

info.cern.ch/hypertext/WWW/TheProject.html

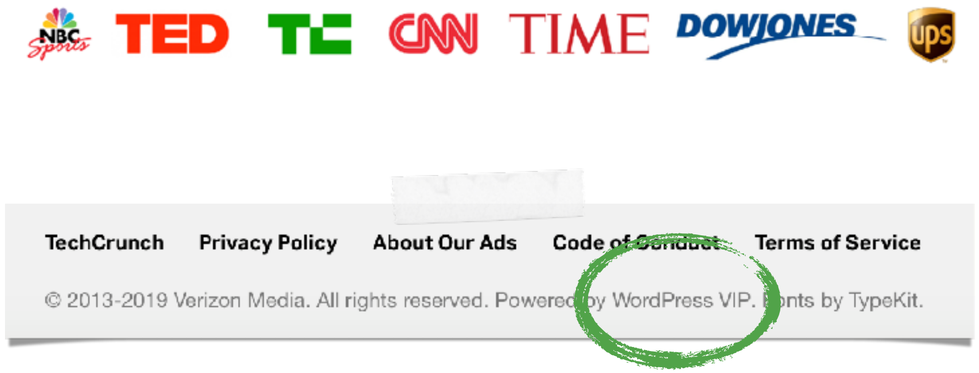
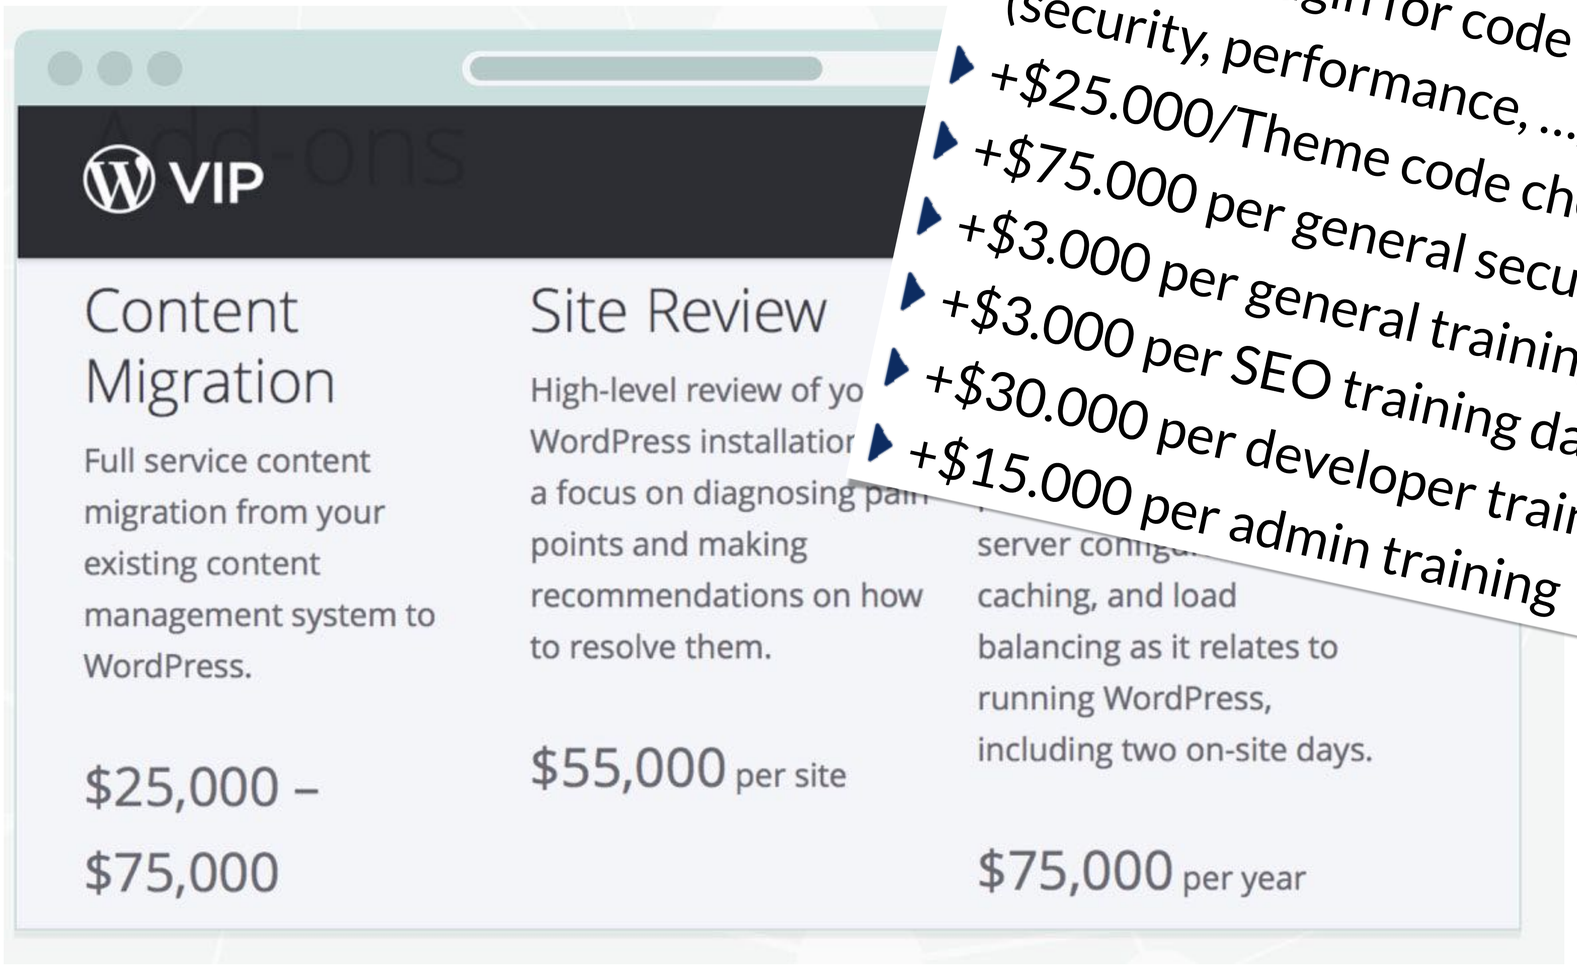
How do other smart companies do it?





- +$75,000/year for certified updates
- +$5.000/plugin for code check (security, performance, …)
- +$25.000/Theme code check
- +$75.000 per general security review
- +$3.000 per general training day (4 ppl)
- +$3.000 per SEO training day (4 ppl)
- +$30.000 per developer training (4 ppl)
- +$15.000 per admin training

neliosoftware.com/es/blog/wordpress-vip-un-servicio-para-grandes-empresas/

And by the way: You **can't change code directly**.

Every single line of code you add
has to be reviewed before put into production.

"We use Wordpress, because it is **cheaper**…
and **everybody else does it**.

They all **can't be wrong**."

(And we've **saved big** on license cost!)

The Web needs a paradigm shift

For the last 15 years, the web has been built on-the-fly, causing increasing issues with …

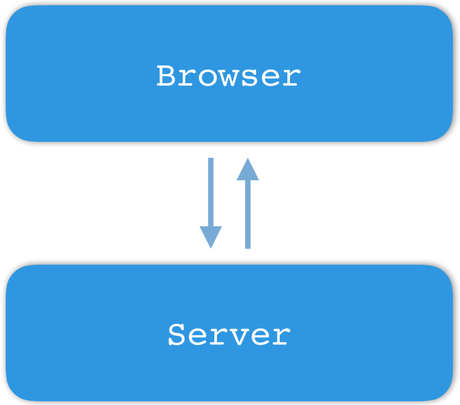
- Security
  - Over 10% of all sites hacked
  - More security exploits than days in a year for popular CMS
- Performance
  - Single Origin
  - Builds for every visitor
  - Low conversion
  - Not mobile friendly
- Scalability and Infrastructure
  - Infrastructure needs to scale up-front
  - Different technologies for back-end and front-end
- Maintaining a CMS is not a value in itself!

How do we **solve** this?

Frontend: The **New Stack** (Pump up the JAM)

The Evolution of the Web

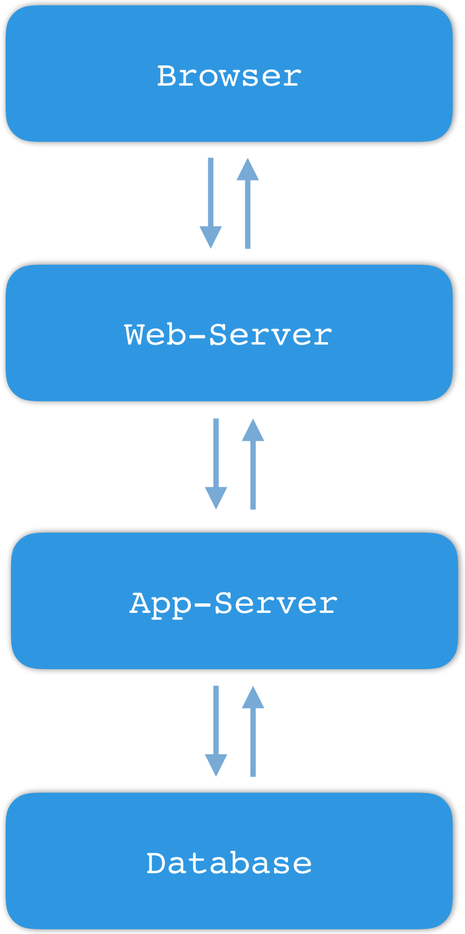
Classic Web-Server (Static site)



until 1997

Legacy Web

(Site built EVERY time it is served)



1997 - Today

How fast is your site? You can test here the performance of any of your sites from across the globe.

www.scrivito.com

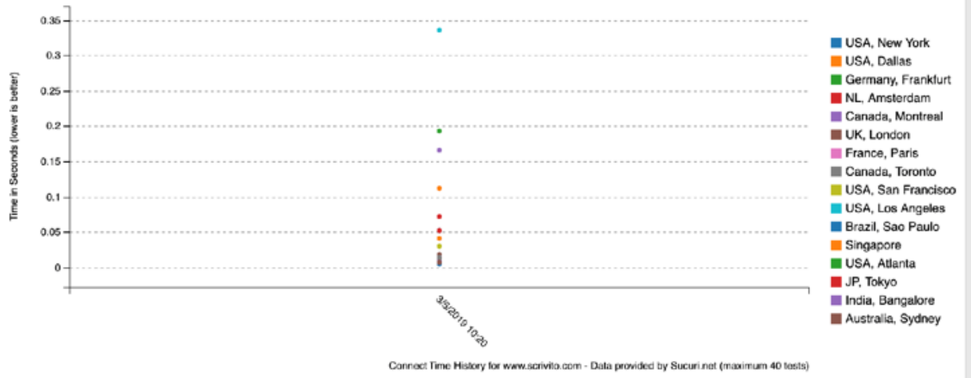
TEST LOAD-TIME

Do not show the results on the boards

This test measures how long it takes to connect to your site and for one page to fully load. A very important value to pay attention is the **"time to first byte"**, which gives us how long it took for the content to be sent back to browser to start processing the page. If you are using a CDN *(Content Delivery Network)*, your connection time may be low, but if the time to first byte and total time is also not low, it will not give you much in terms of performance.

	Location	Website	Connection	First Byte	Total
	Brazil, Sao Paulo	www.scrivito.com *(52.67.148.165)*	0.004530 secs	0.017798 secs	0.024343 secs
	Australia, Sydney	www.scrivito.com *(13.236.188.46)*	0.007 secs	0.663 secs	0.930 secs
	Canada, Montreal	www.scrivito.com *(167.99.4.63)*	0.009 secs	0.131 secs	0.262 secs
	Germany, Frankfurt	www.scrivito.com *(167.99.137.12)*	0.013 secs	0.080 secs	0.108 secs
	France, Paris	www.scrivito.com *(167.99.137.12)*	0.014 secs	0.147 secs	0.205 secs
	Canada, Toronto	www.scrivito.com *(167.99.4.63)*	0.014 secs	0.161 secs	0.259 secs
	UK, London	www.scrivito.com *(167.99.137.12)*	0.018 secs	0.133 secs	0.236 secs
	USA, San Francisco	www.scrivito.com *(104.248.78.24)*	0.030 secs	0.175 secs	0.304 secs
	USA, Dallas	www.scrivito.com *(167.99.4.63)*	0.041 secs	0.215 secs	0.289 secs
	USA, New York	www.scrivito.com *(142.93.122.177)*	0.052 secs	0.082 secs	0.142 secs
	NL, Amsterdam	www.scrivito.com *(167.99.137.12)*	0.052 secs	0.146 secs	0.199 secs
	JP, Tokyo	www.scrivito.com *(178.128.115.5)*	0.072 secs	0.460 secs	0.910 secs
	Singapore	www.scrivito.com *(178.128.115.5)*	0.112 secs	0.131 secs	0.252 secs
	India, Bangalore	www.scrivito.com *(178.128.115.5)*	0.166 secs	0.466 secs	0.674 secs
	USA, Atlanta	www.scrivito.com *(104.248.78.23)*	0.193 secs	0.286 secs	0.816 secs
	USA, Los Angeles	www.scrivito.com *(167.99.4.63)*	0.336 secs	0.362 secs	0.498 secs
	Average response time		0.057 secs	0.213 secs	0.368 secs
	Global Performance Grade *(Based on Total Time)*		PERFORMANCE GRADE: A+		

CONNECTION TIME | FIRST BYTE TIME | TOTAL TIME



Connect Time History for www.scrivito.com - Data provided by Sucuri.net (maximum 40 tests)

So we're back to 😳

We now build 😮

Hyperdynamic

Sites

1. **Pre-render** the HTML markup

2. Enhance with **ReactJS**!

All **public pages are pre-built** resulting in lightning speed performance,
but **every part can and is dynamic**, thanks to JavaScript.

JS

Application Logic

URL Routing

View/Rendering/Layout

Data Persistence

User Management

Forms Validation

Animations

DOM Manipulation

React JS

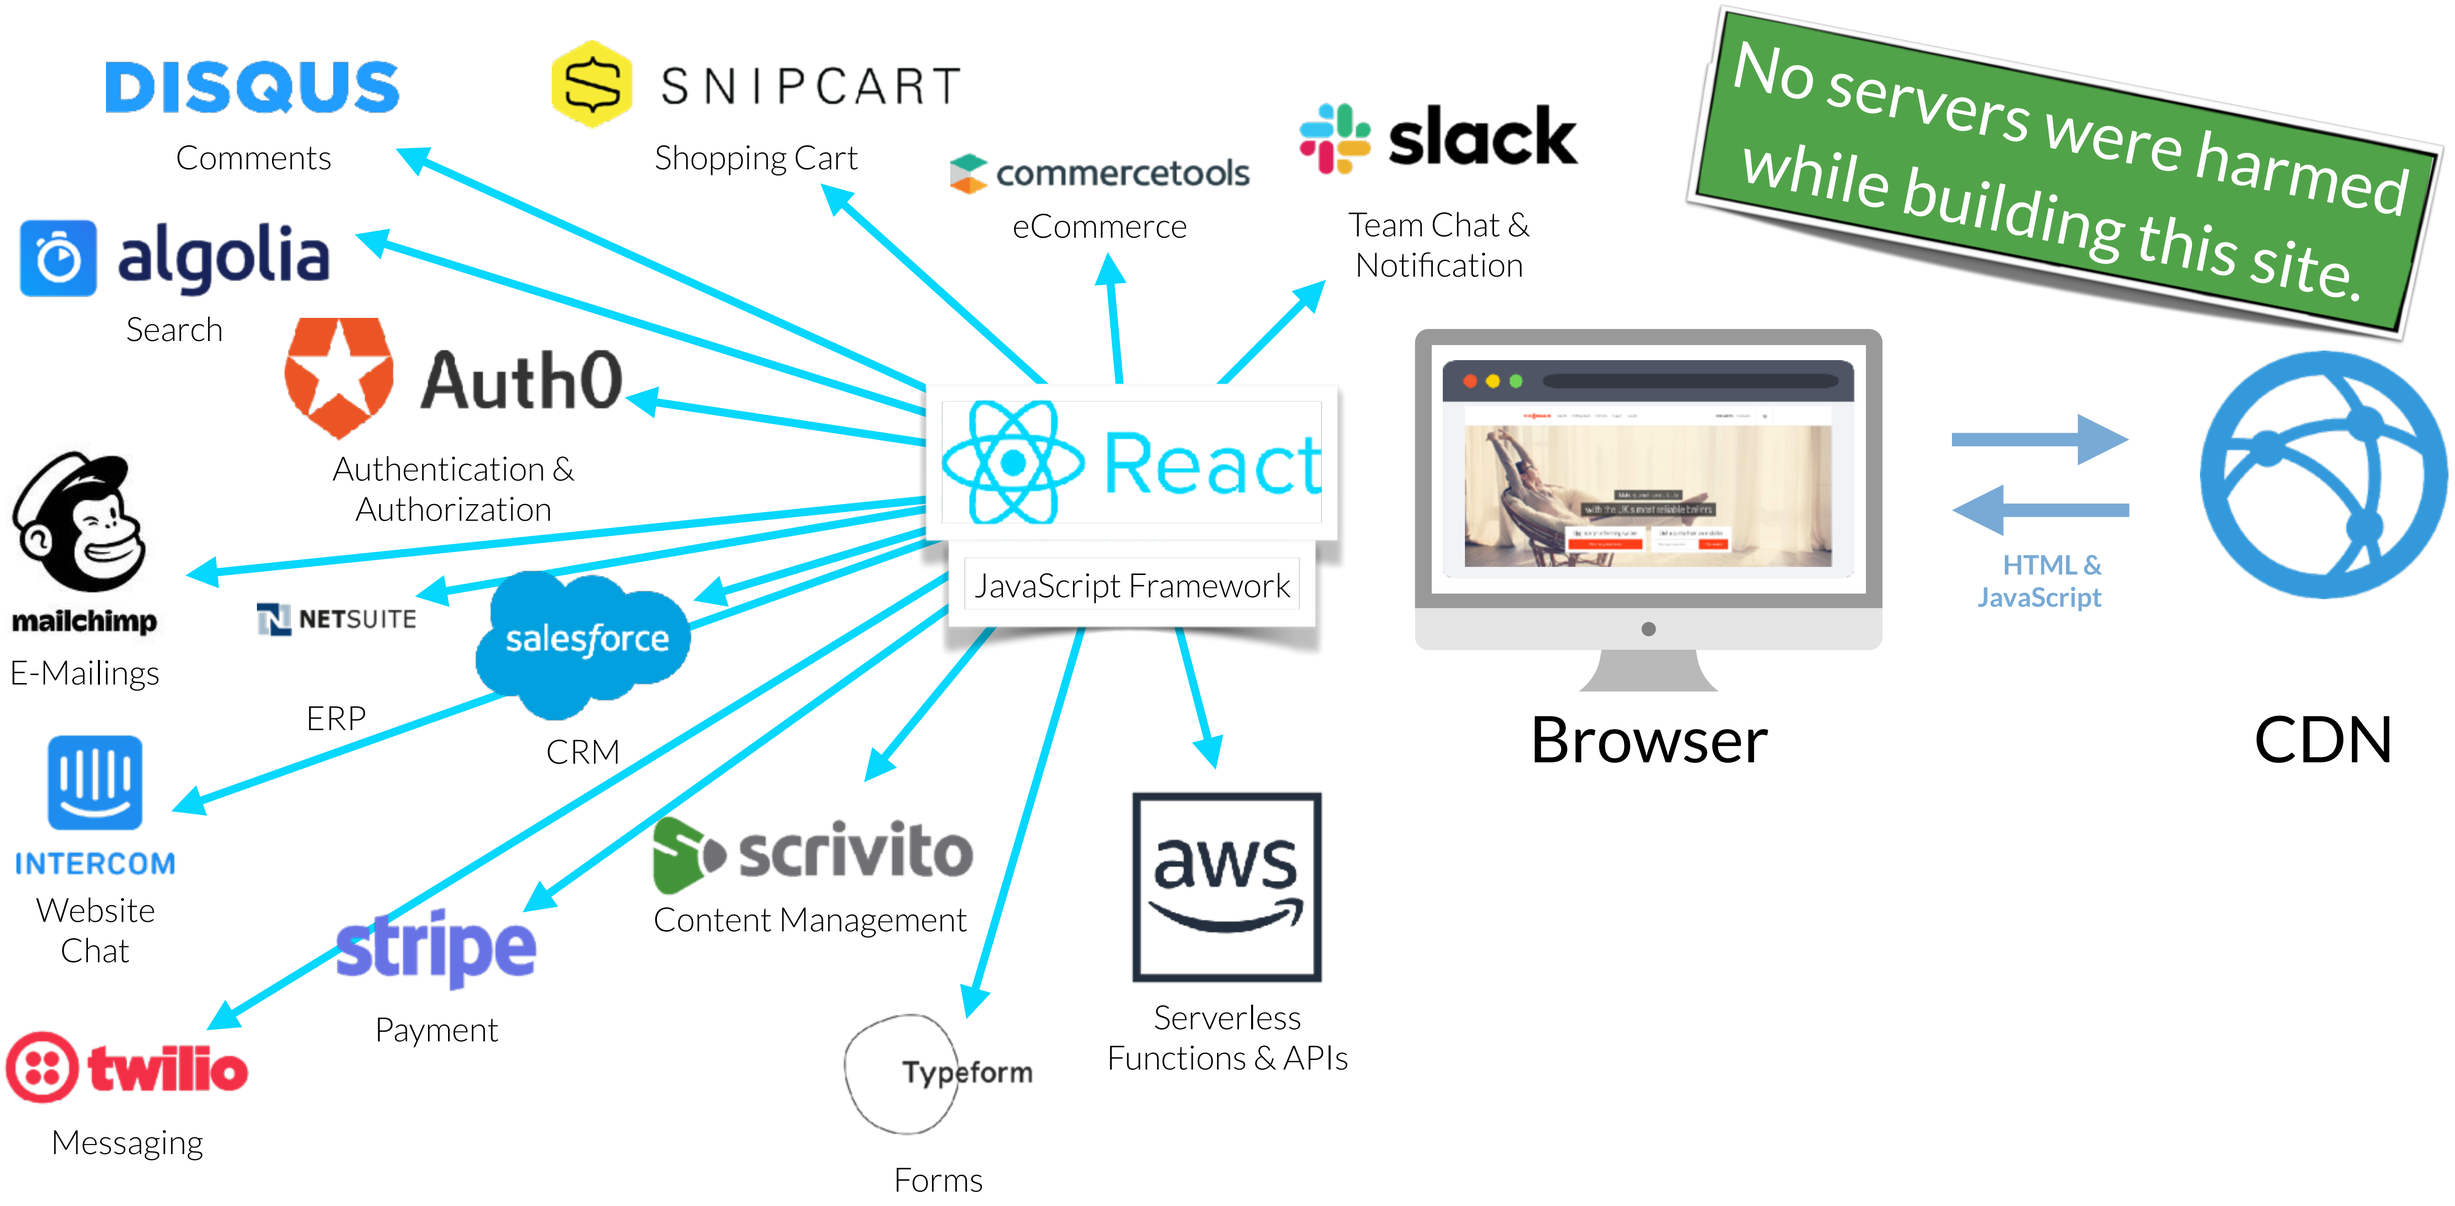
Welcome to the API Economy - the browser as integration platform

Welcome to the API Economy - the browser as integration platform



J

A

M

Javascript

A

M

Javascript APIs M

Javascript

APIs

Markup

Javascript

*Any **dynamic programming** during the request/response cycle is **handled by JavaScript**, running **entirely on the client.***

APIs

*All **server-side processes or database actions** are abstracted into **reusable APIs**, accessed over HTTPS with **JavaScript**. These can be **custom-built or leverage third-party services**.*

Markup

*Markup are **prebuilt** at deploy time.*

Advantage:

Static sites **don't need servers**

No servers = **no hacking, no patching, no nothing**.

JAMstack: Cheaper to scale, more secure, easier to maintain

Decoupled Building and Hosting

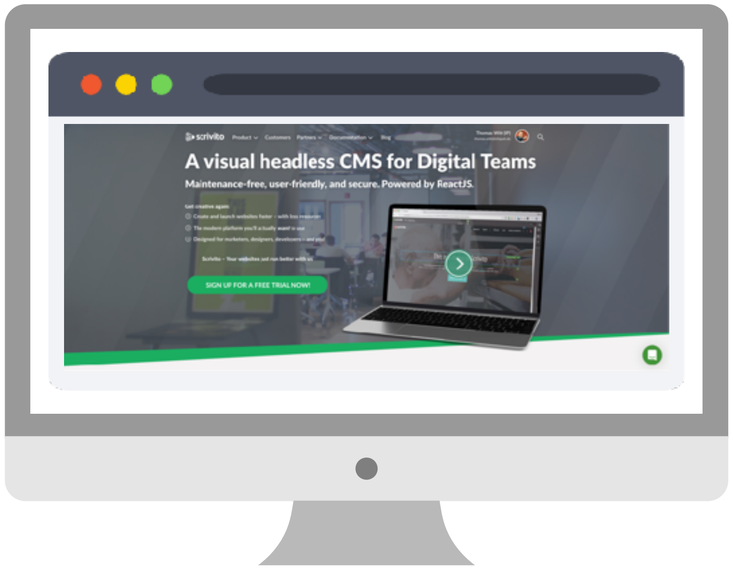
- Entire public site is on a CDN
- 100% fail-proof and SEO-compatible
- Infinitely scalable
- Reduced attack vectors

Pre-Rendered HTML-Markup

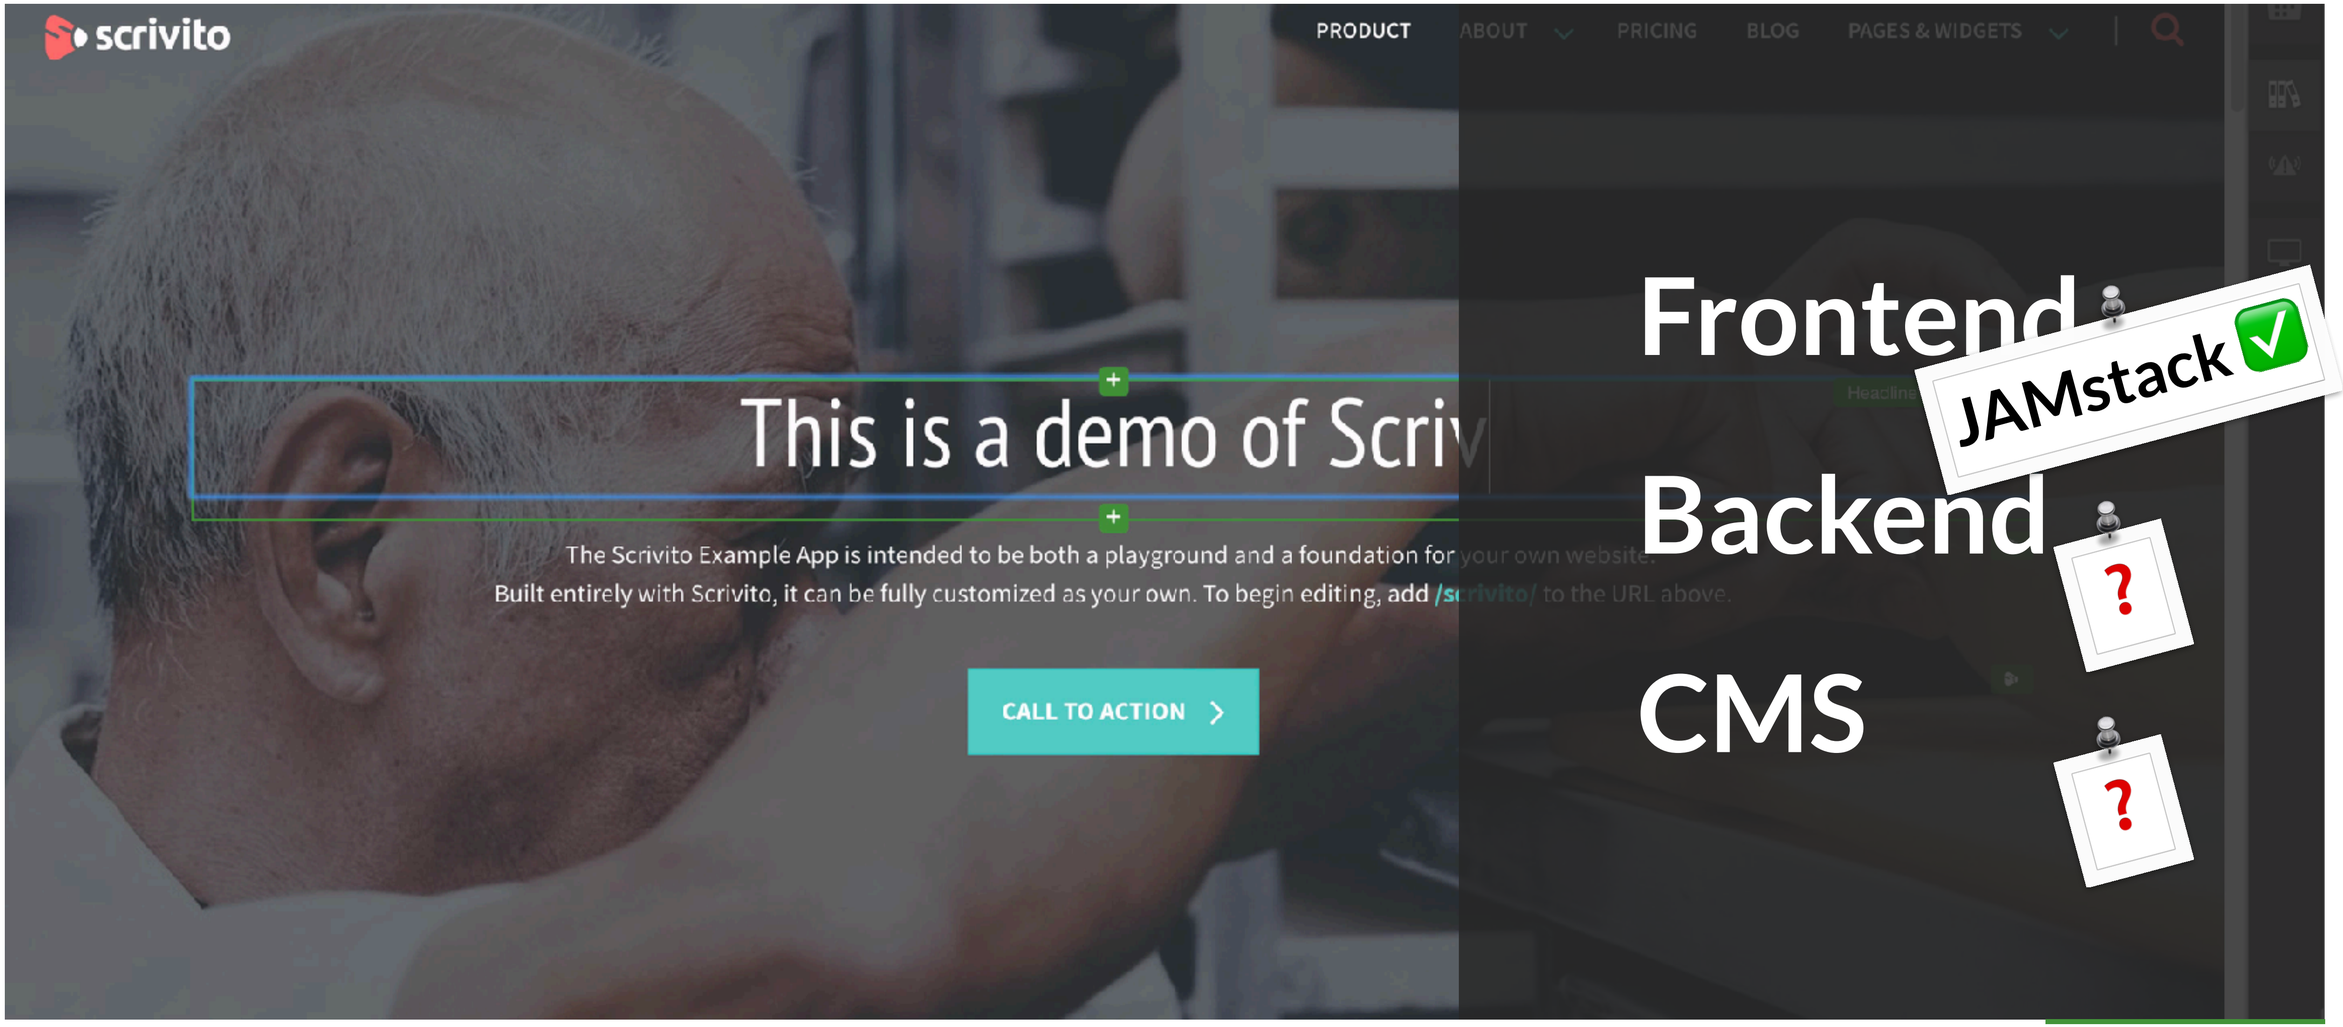
- Faster sites (First Contentful & Meaningful Paint)
- Apply logic by rehydrating the page in the client with ReactJS
  - The web-browser is the integration platform

APIs

- APIs rather than databases



We need a new approach how to build web-sites



But how do I create those backend

APIs?

Backend: New Architectures (Will it Lambda?)

Servers are a thing of the **past**.

Cloud Functions serverless platform is generally available

Jason Polites
Lead Product Manager

August 13, 2018

Try GCP

Get $300 free credit to spend over 12 months.

It was a busy week for serverless computing at Google Cloud Next '18 in San Francisco. In addition to the updates we shared from the show, we covered our Cloud Functions technology in more than 15 technical sessions. There are a lot of things to unpack, ranging from new feature releases to best practices. This post is your one-stop summary of Cloud Functions: what's new, sign-up instructions for early access features, and some tips on where you can find more information on useful technical sessions and insights from Next '18.

Introducing Azure Functions 2.0

Posted on September 24, 2018

Eduardo Laureano, Principal PM Manager, Azure Functions

Today, we're very pleased to announce the general availability of Azure Functions 2.0! This is a huge milestone packed with several capabilities, all focused around making it easier than ever for you to build highly scalable serverless applications.

Azure Functions 2.0 is production ready and capable of handling your most demanding workloads, backed by our 99.95 percent SLA. We strongly encourage to start any new development on 2.0 and recommend that customers upgrade their existing 1.0 apps to the 2.0 version, to experience all the benefits of this new release. For specific instructions, please see our upgrading to 2.0 guidance.

What's in this release?

Functions 2.0 advances the product in terms of user experience, developer capabilities, and platform robustness. The most significant changes are to the host runtime, which is now portable, cross-platform, and more efficient. This enables a wide range of options for how you build and run your apps.

More platforms, more options

Azure Functions can now run in more environments, including locally on your Mac or Linux machine. Combine this with our fantastic integration with VS Code, and you have a best-in-

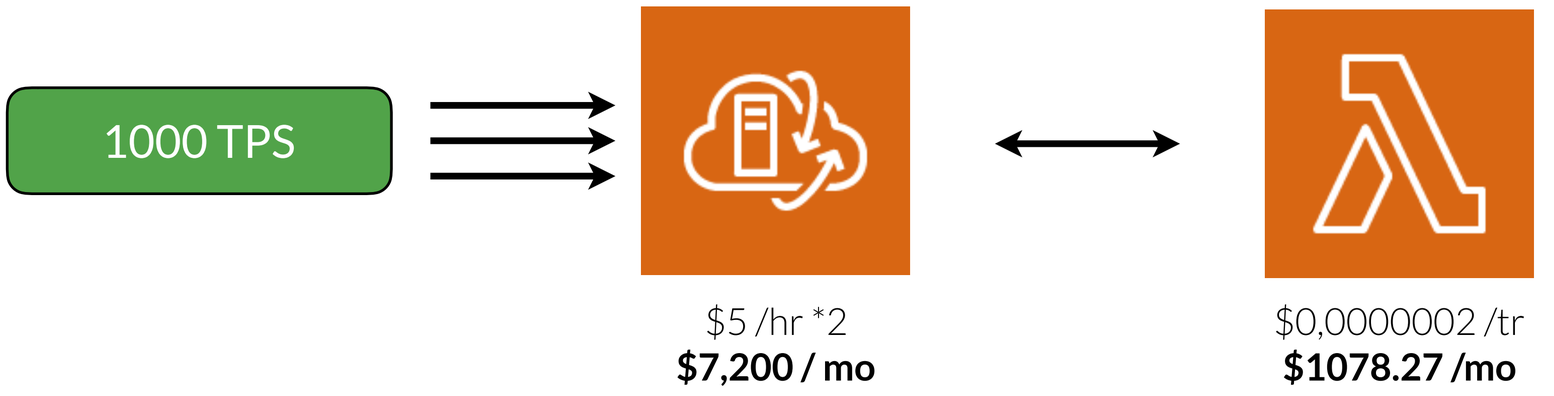
Pay per use



Time-based **Usage-based**

Advantages of Serverless Computing

Serverless means …

- **don’t pay for it** if no-one uses it
- **don’t** need to **worry about scaling**
- **don’t** need to **provision and manage servers**

… resulting in applications which are

- **cheaper**
  - Don't pay for idle servers
- **resilient**
  - Auto-scaling, high availability and redundancy by default
- **secure and maintenance free**
  - Infrastructure maintained and patched by default
- using the **same programming language** for back- and frontend
  - JavaScript
  - More efficient development processes

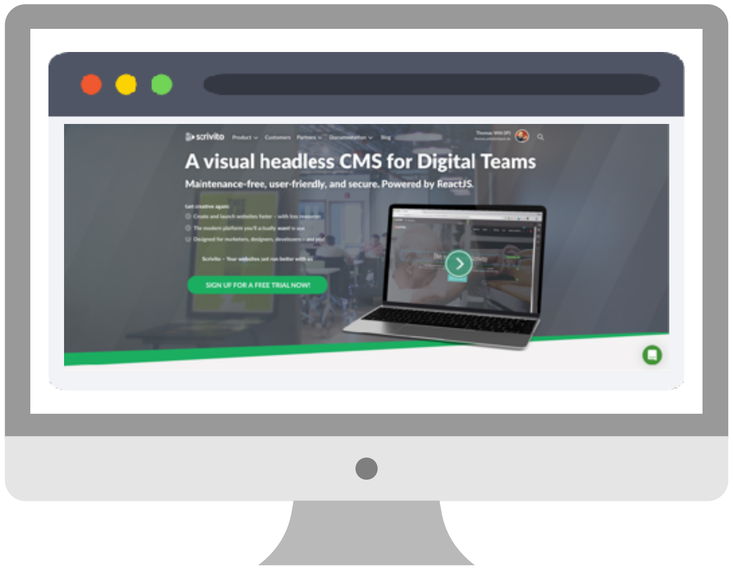
JAMstack ❤️ Serverless Functions for APIs

Decoupled Building and Hosting ✅

Pre-Rendered Markup ✅

APIs

- APIs replacing databases
- External APIs (BaaS)
  - e.g. "Headless CMS"
- JavaScript Functions (FaaS)
  - Same technology for front- and back-end



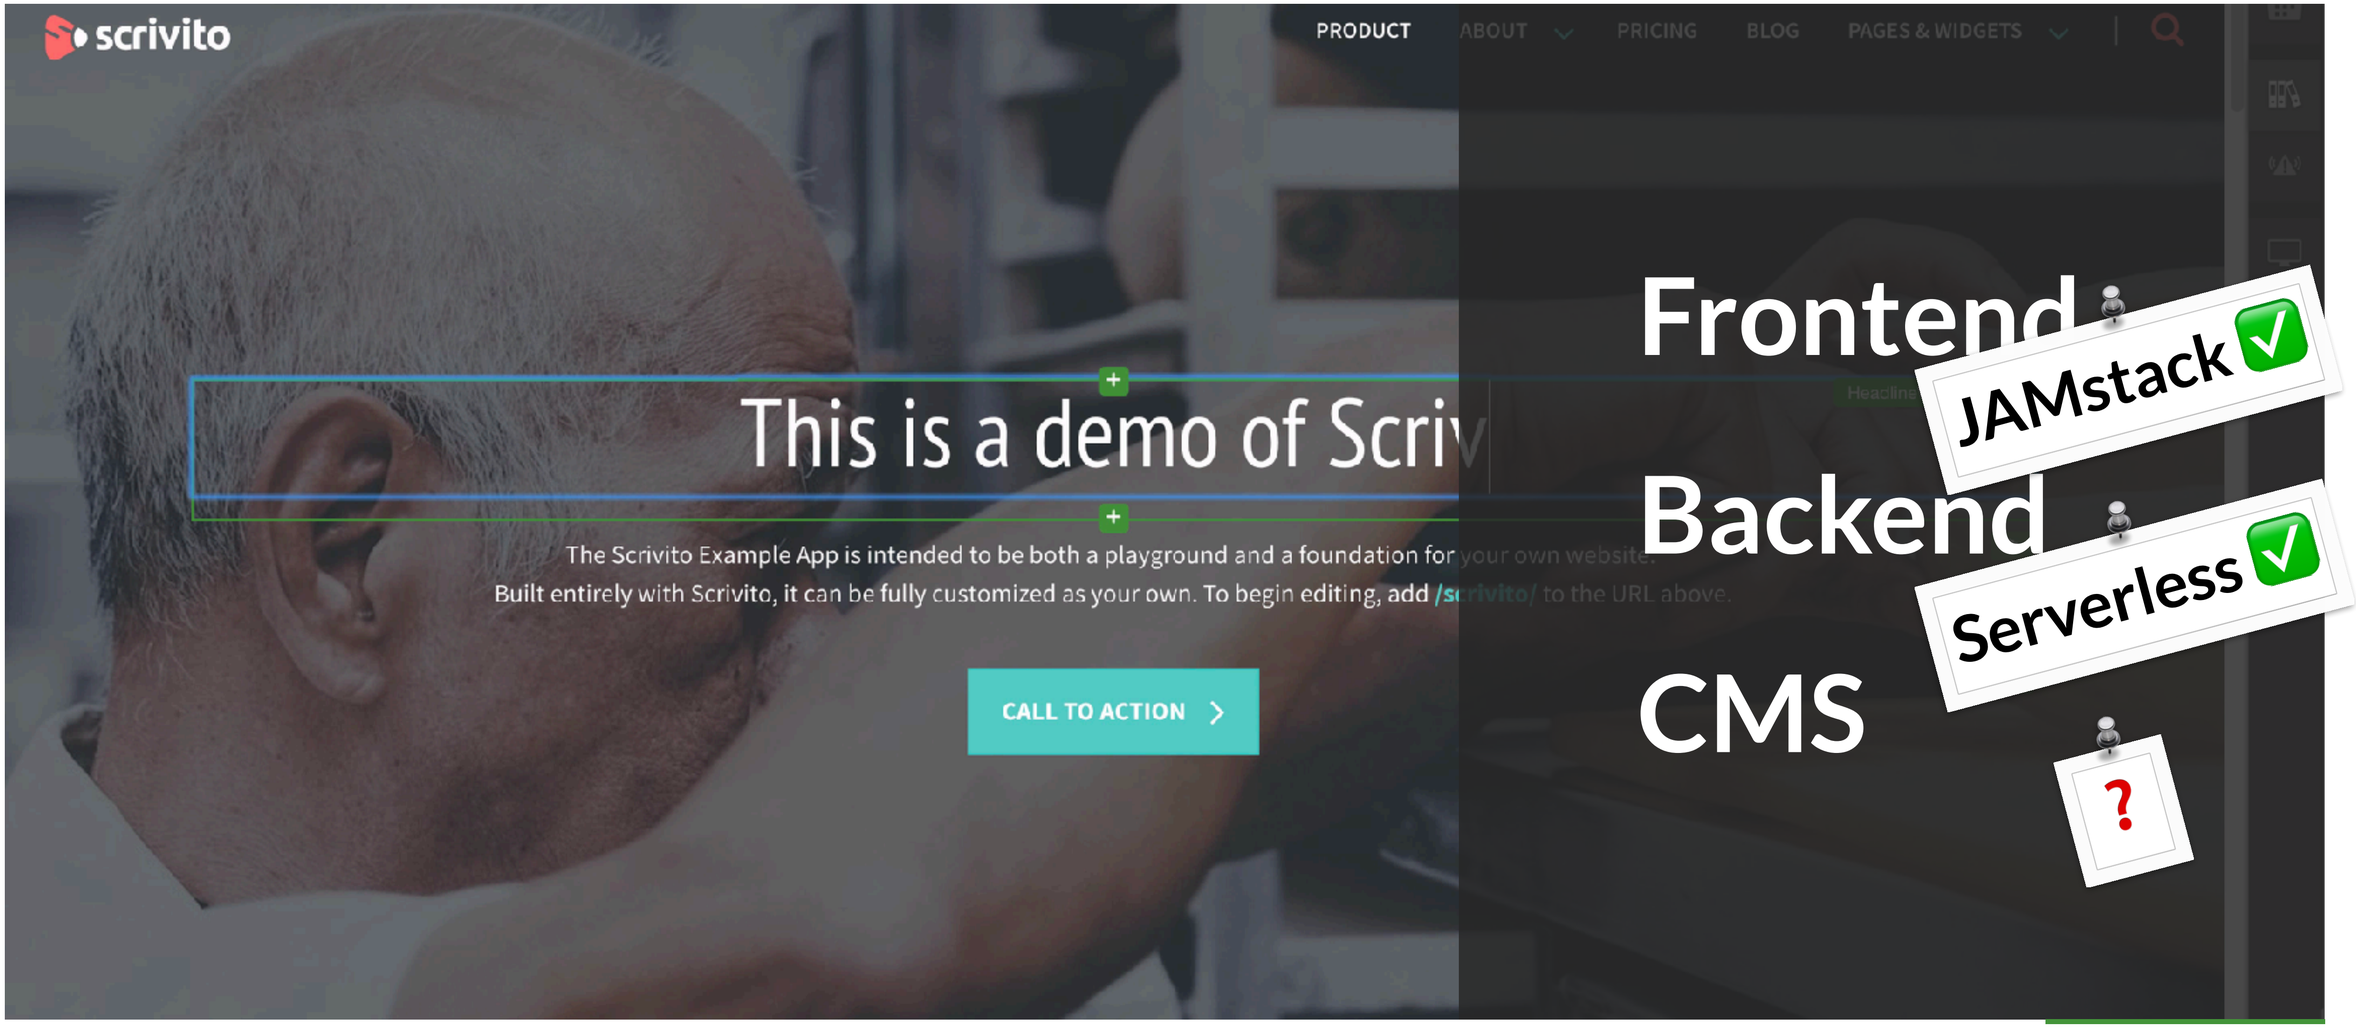
JAMstack does indeed **move complexity elsewhere**.

It moves it out of your area of responsibility. And it moves it over to **domain experts who offer specialized services as commodities**.

It is perfectly possible that **complexity still exists**. But we don't need to shoulder that burden. In the same way as wireless routers depend on wires.
And serverless functions run on servers.

Somewhere. But not in my house. :)

We need a new approach how to build web-sites



So I just need a

Headless CMS,

move to **JAMstack** and **Serverless**

and **everything's gonna be alright**?

Not so fast.

"What might be surprising:

The use case of a single repository of information feeding **a single website** is

not a great value-add for a headless CMS.

There's **just not a huge value proposition** there."

gadgetopia.com/post/9743

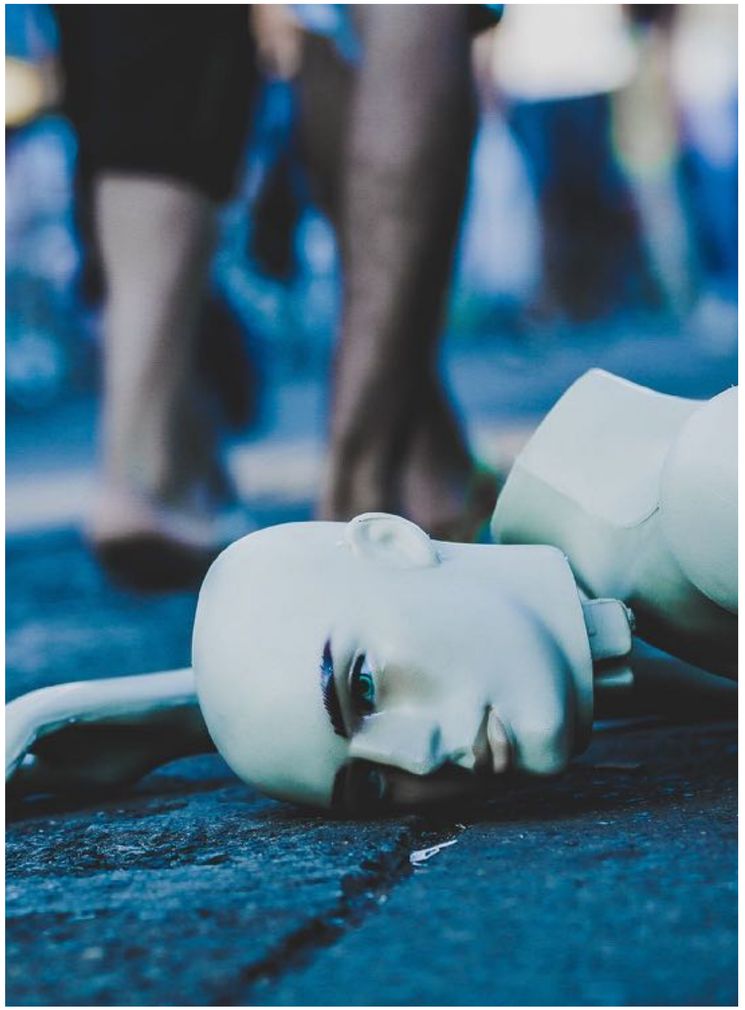
Where pure headless CMSes fail miserably

The Web is Still a Visual Medium

- In the end, a pure Headless CMS is just a remote database

What pure headless CMS don't offer

- Comfortable Editor UI (I'll show you …) & In-Context Editing
- Page-based composition with widgets
- Page previews
- URL and Hierarchy Management
  - List Ordering, Child Content Objects, Referential Content Attributes
- Real-Time collaboration
- Workflows and Permissions
- Full Text Search



The ugly truth:

Headless CMSes just developed half of the product

… and sell this as a feature.

What about the editors?

CMS UIs suck

They don't really care about us.

I am writing this text, but I have no idea how my web-site is going to look like

Wouldn't you rather like a CMS … well … with a head?

… because otherwise you might be losing your head sooner or later.

The State of CMS in 2019

Open Source

- Bad UX, ancient technologies, server-based / not native cloud

Commercial

- Expensive, ancient technologies, server-based / not native cloud

Cloud Web-Site Builders

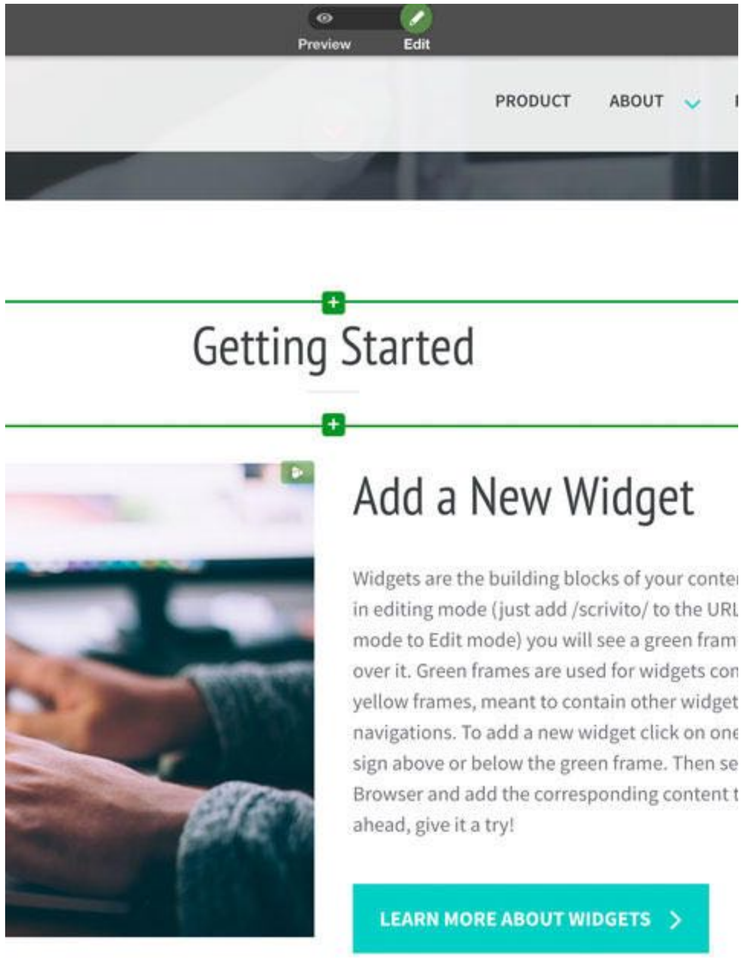
- Not extensible, only small biz

Pure Headless CMS

- Bad UX, not a full solution

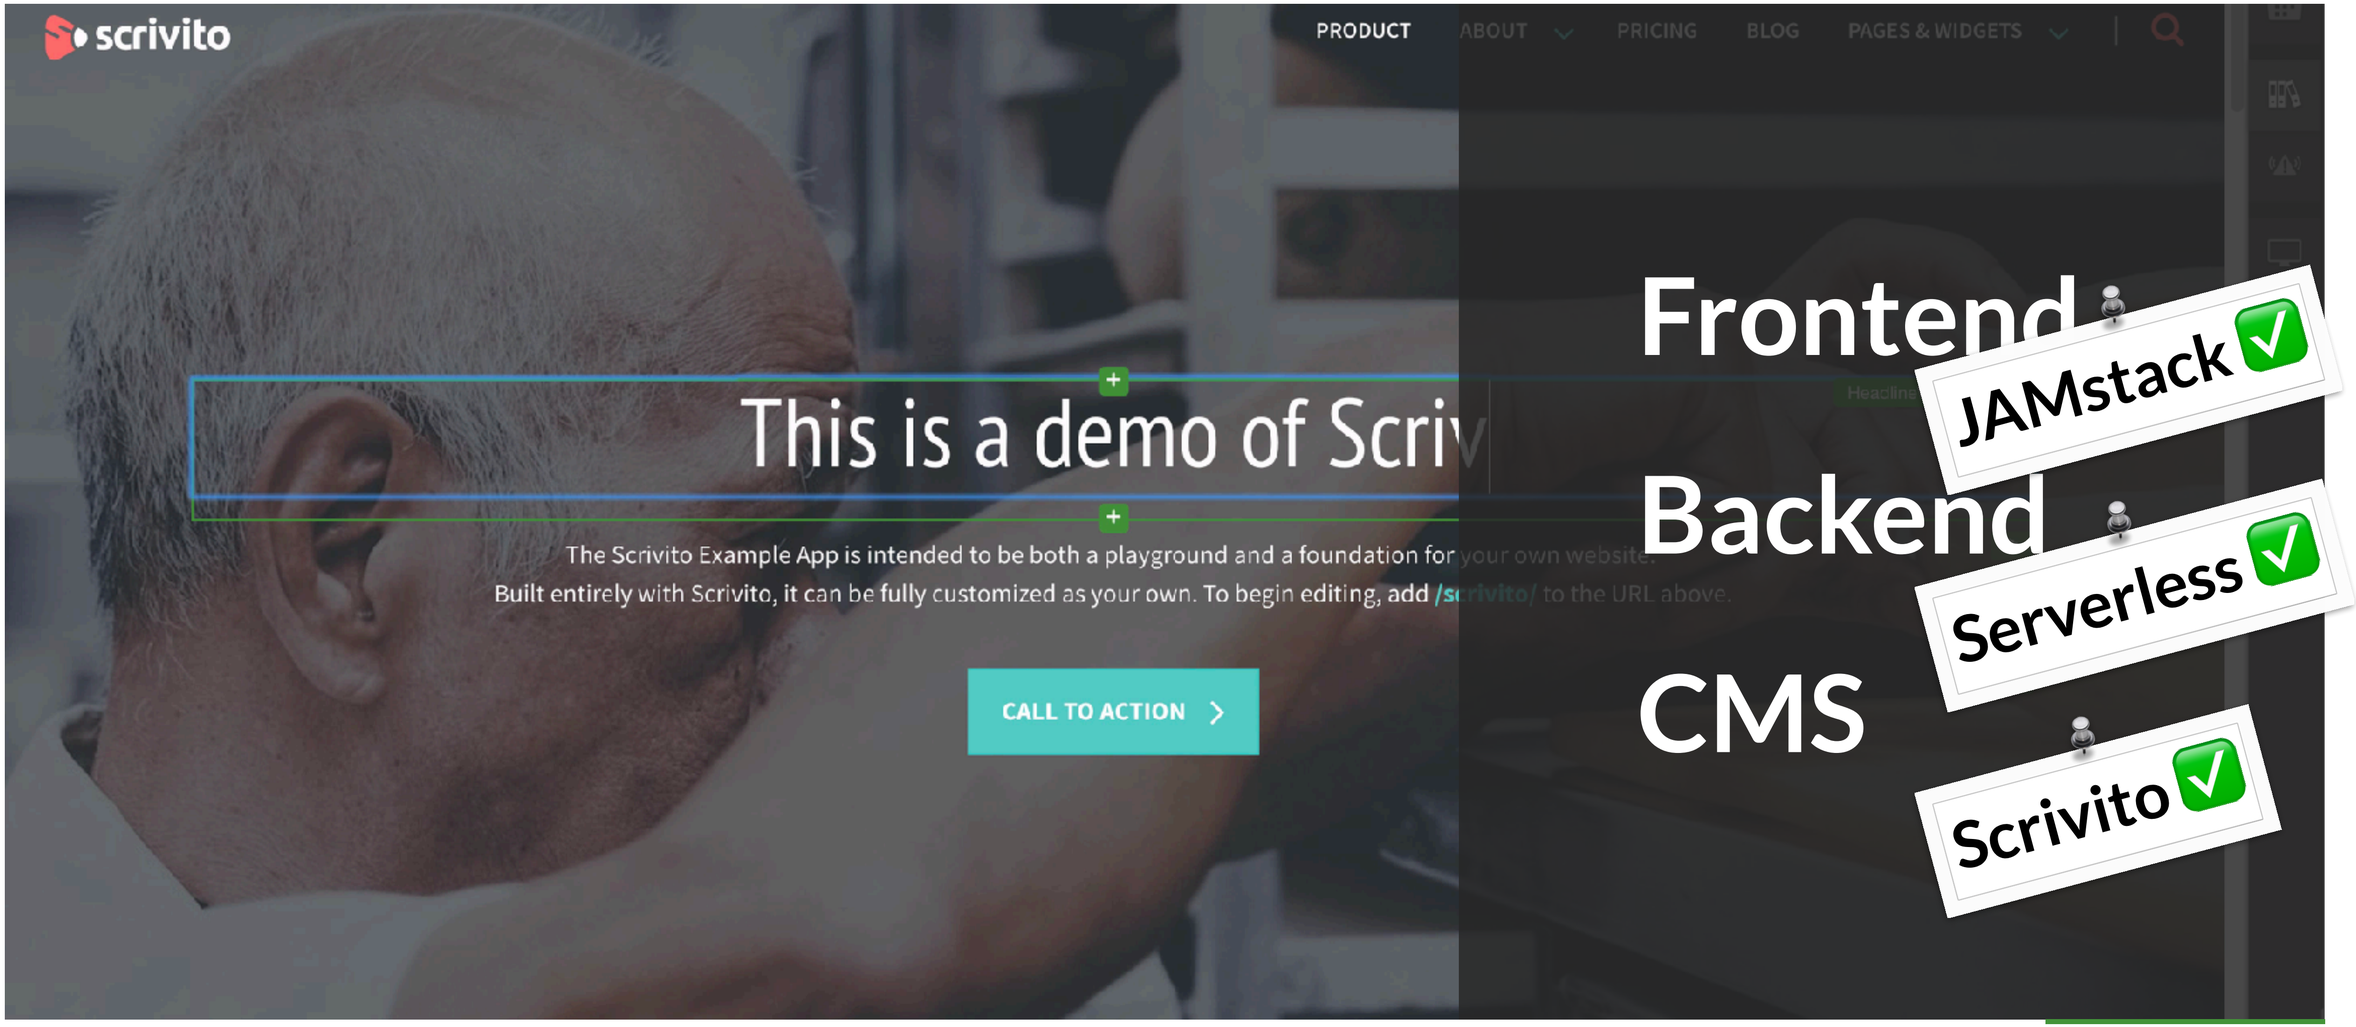
Editor wish list for a modern headless CMS with a head

- Intuitive WYSIWYG editing
  - Cross-Device Preview
- Modular page structure
  - Using ReactJS components as Widgets
- Drag-and-Drop
- Auto-saving
- Real-time collaboration on content
  - Working Copies (like git branches)
  - Parallel editing like Google Docs
  - Like programmers on code – git branches, anyone?
  - History and Roll-Back
- SEO & Social Media
- Media Asset Management
- Hierarchies and Navigations
- Permissions, Workflows, History, Roll-Back
- … and of course: serverless & still 100% native cloud based



Demo

THIS is the new approach how to build web-sites

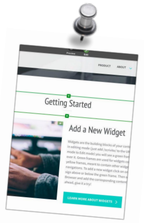


Check lists for a modern CMS (with a head) in 2019

Tech/Developer/IT

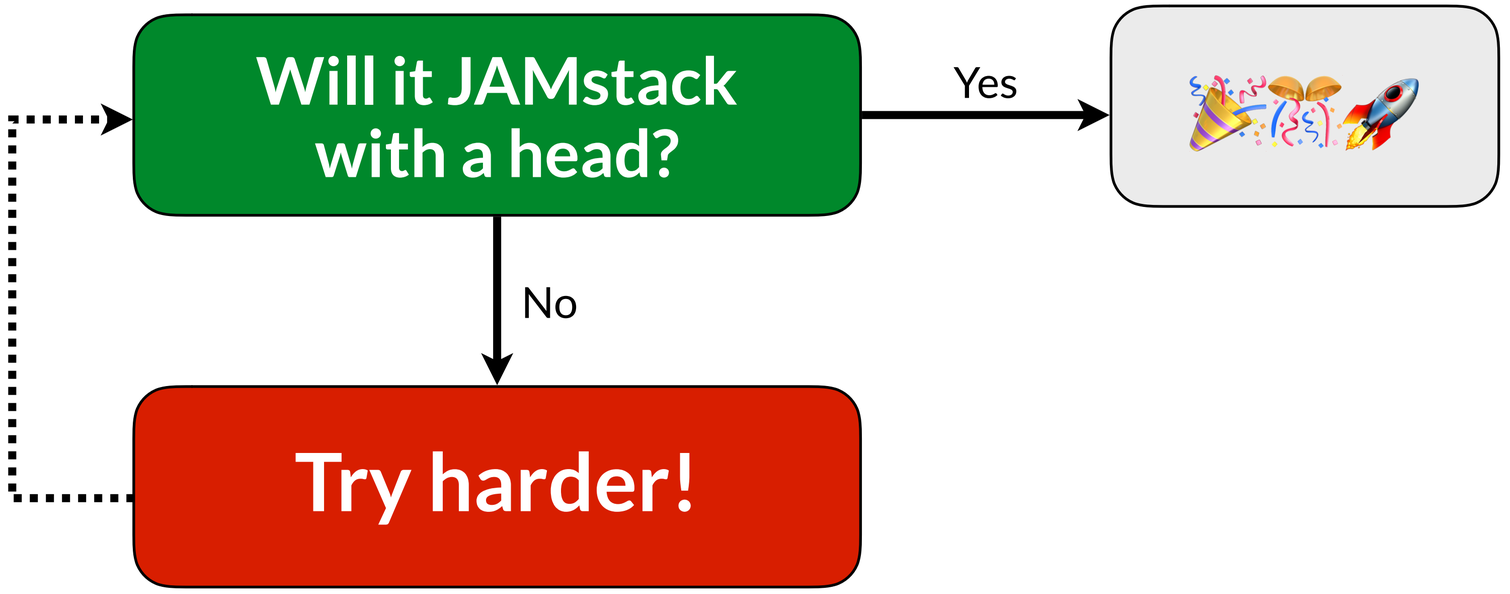
- **Security, Performance, Scalability & Reliability**
  - **Serverless**, API-driven, decoupled
  - Entire site on **CDN out-of-the-box**
- Zero infrastructure, **maintenance**, patching
  - Low **total cost of ownership**
- Modern **integration and customization** capabilities
  - Single **JavaScript Technology Stack**
  - Frontend: **ReactJS**
  - Serverless backend: **Lambda**
  - **APIs** and **SDKs**
- Centralized **Authentication and Authorization**
  - **JWT** compatible
- 100% **Native Cloud** Setup
  - Not a dedicated legacy software install on servers
  - **Native multi tenancy solution,** built for the cloud

Editors / Usability



- Intuitive **WYSIWYG editing**
  - Modular page structure using **ReactJS Widgets**
  - **Drag-and-Drop**
  - Cross-device preview
  - **Auto-Saving**
- Real-time **collaboration on content**
  - Working Copies (like git branches)
  - Parallel editing like Google Docs
  - Permissions, Workflows, Roll-Back, History
- **SEO**
  - Including Social Media Support
- Media **Asset Management**
  - Automatic image optimizations / resizing
- **Hierarchies and Navigations**
- Built-in, powerul **Search**

Easy Flowchart



Shameless self-promotion
